

Key Benefits

- Multivariable vortex flowmeter for measuring volumetric flow, temperature, pressure, density, and mass flow using a single meter
- Measures most gases, liquids and steam without the need to recalibrate
- Advanced design and digital signal processing for vibration isolation
- Cost effective, accurate and reliable meter for volumetric and mass flow measurement for pipe sizes from ½ in to 8 in (15 mm to 200 mm)
- Energy management through accurate measurement of both temperature and mass flow simultaneously
- Remote monitoring and integration to DCS using HART® and Modbus® communication protocols
- Significant cost savings through reduced installation costs, wiring runs and services support using MV meter with no moving parts
- FM USA/Canada-approved, explosion-proof and dust ignition-proof

Applications

- Ideal for high temperature and high velocity steam
- Power Generation—steam applications
- Industrial—HVAC, district energy management
- Commercial—building, campus and facility energy management
- Oil & gas—allocation of natural gas
- Petrochemical—mass balancing, reaction processes heating

PanaFlow™ MV80

In-line Multivariable
Flowmeter for Mass,
Temperature, and
Pressure

GE Sensing

Unique Multivariable Design

GE Sensing's PanaFlow MV80 In-line Multivariable Mass Vortex flowmeter is the next generation vortex meter. PanaFlow MV80's multivariable design consists of a vortex shedding velocity sensor, an RTD temperature sensor and a solid state pressure transducer that measures the mass flow rate of steam, gases and liquids.

Other meter types use external process measurements to calculate mass flow. The temperature and pressure devices are typically not installed in the same location as the flowmeter. Process conditions can vary greatly between the two locations, causing inaccurate mass flow readings. PanaFlow MV80 measures velocity, temperature and pressure at the same location, which provides more accurate process measurement.

Simple and Cost Effective

Integrating pressure and temperature into the vortex flowmeter simplifies system complexity and helps minimize initial capital costs, as well as reduce the installation costs. There is no need to purchase additional instrumentation to monitor pressure and temperature since the PanaFlow MV80 will output all parameters to your data acquisition system.

The product line is available with a wide range of options and meter configurations to meet your specific application requirements.

Portfolio of Flowmeter Solutions

GE Sensing is committed to providing customers with the best technologies for their flow measurement needs. PanaFlow MV80 is the newest addition to the PanaFlow family of flowmeters, providing effective solutions for smaller pipe sizes for a variety of applications. GE Sensing offers the PanaFlow MV80 in a number of configurations to best suit your application measurement needs.

PanaFlow MV80-VTP

The MV80-VTP offers flow computer functionality in a compact field device. This multivariable instrument incorporates temperature and pressure sensors to provide an instantaneous reading of compensated mass flow rate of gases, liquids and steam. In addition to outputs for totalized mass and alarm settings, the field-configurable electronics deliver up to three analog 4-20 mA outputs of five process measurements, including volumetric flow rate, mass flow rate, pressure, temperature and density.

PanaFlow MV80-VT

The MV80-VT integrates a precision 1000 ohm platinum RTD temperature sensor used to calculate and output a compensated mass flow reading. This device is typically used to measure flow rates of saturated steam.

PanaFlow MV80-V

The MV80-V delivers a direct reading of volumetric flow rate—generally the most cost-effective solution for liquid flow monitoring—in applications ranging from general water flows to hydrocarbon fuel flow measurement.

PanaFlow MV80-EM

The MV80-EM energy monitoring option enables real time-of-flight diffraction calculation of energy consumption for a facility or process. The meter can be programmed to measure steam, hot water or chilled water. This option uses the MV80-EM flowmeter to monitor one side of the process, either sent or return, and uses the input from a second separate temperature sensor on the opposite leg of the process to calculate the change in energy. Selectable energy units include BTU, joules, calories, Watt-hours, Megawatt-hours and Horsepower-hours. The local or remote electronics indicate two temperatures, delta T, mass total and energy total.

PanaFlow MV80 Specifications

Performance

Accuracy

Mass flow rate accuracy for gas and steam based on 50-100% of pressure range

PanaFlow MV80 Accuracy Flowmeter		
Process Variables	Liquids	Gas and Steam
Volumetric Flow Rate	± .7% of Rate	± 1% of Rate
Mass Flow Rate	± 1% of Rate	± 1.5% of Rate
Temperature	± 2°F (± 1°C)	± 2°F (± 1°C)
Pressure	± .3% of Full Scale	± .3% of Full Scale
Density	± .3% of Reading	± .5% of Reading

Repeatability

Mass Flow Rate	± 0.2% of rate
Volumetric Flow Rate	± 0.1% of rate
Temperature	± 0.2°F (± 0.1°C)
Pressure	± 0.05% of full scale
Density	± 0.1% of reading

Stability Over 12 Months

Mass Flow Rate	± 0.2% of rate
Volumetric Flow Rate	negligible
Temperature	± 0.9°F (± 0.5°C)
Pressure	± 0.1% of full scale
Density	± 0.1% of reading

Response Time

Adjustable from 1 to 100 seconds

Operating

Process and Ambient Temperature

Process Standard Temperature (code ST):	-40 to 500°F (-40 to 260°C)
Process High Temperature (code HT):	Up to 750°F (400°C)
Ambient Operating:	-5 to 185°F (-20 to 85°C)
Ambient Storage:	-40 to 185°F (-40 to 85°C)

Pressure Transducer Ratings			
Full Scale Operating Pressure		Max. Over-Range Pressure	
psia	bara	psia	bara
30	2	60	4
100	7	200	14
300	20	600	40
500	35	1000	70
1500	100	2500	175

Power Requirements

Model MV80-V: 12-36 VDC loop powered
Model MV80-VTP, DC option: 12-36 VDC, 100 mA max
Model MV80-VTP, AC option: 85-240 VAC, 50/60 Hz, 1 Watt

Display

Alphanumeric 2 line x 16 character LCD digital display

Six pushbuttons for full field configuration

Pushbuttons can be operated with magnetic wand without removal of enclosure covers

Display can be mounted in 90° intervals for better viewing

Output Signals

Analog: 4-20 mA, loop powered for volumetric meters

Alarm: Solid state relay, 40 VDC

Totalizer Pulse: 50 millisecond, 40 VDC

Volumetric: One analog, one totalizer pulse, HART

Multivariable: Up to three analog signals, three alarms, one totalizer pulse, HART

Multivariable option: Modbus process monitoring

Physical

Wetted Materials

316L stainless steel, plus:

- PTFE-based thread sealant on models with pressure transducer
- PTFE packing on standard temperature models with packing gland
- Graphite-based packing on high temperature models with packing gland

FM USA/Canada Approvals

Explosion-proof for Class I, Division 1, Groups B, C & D
Dust-ignitionproof for Class II/III, Division 1, Groups E, F & G

Type 4x and IP66

T6 at Tamb = 140°F (60°C)

PanaFlow MV80 Specifications

Sizing Considerations

Piping Conditions		
Condition	Pipe Diameters, D	
	Upstream	Downstream
One 90° elbow before meter	10D	5D
Two 90° elbows before meter	15D	5D
Two 90° elbows before meter, out of plane	25D	5D
Reduction before meter	10D	5D
Expansion before meter	20D	5D
Partially open valve	25D	5D

Velocity Range

Maximum velocity, liquid: 30 feet/sec (9 meters/second)

Minimum velocity, liquid: 1 foot/sec (.3 meters/second)

Maximum velocity, gas or steam: 300 feet/sec

(90 meters/second)

Minimum velocity, gas or steam feet/sec (meters/second):

5

$\sqrt{\text{density (lb/ft}^3\text{)}}$

6.1

$\sqrt{\text{density (kg/m}^3\text{)}}$

Consult the PanaFlow MV Sizing Program for easy calculation of flow range.
