## Continuous level measurement - Guided wave radar transmitters

### SITRANS LG200

#### Overview

##### Introduction

Guided Wave Radar transmitters combine TDR (time domain reflectometry), ETS (equivalent time sampling) and modern low power circuitry.

##### Time Domain Reflectometry (TDR)

TDR uses pulses of electromagnetic (EM) energy to measure distances or levels. When a pulse reaches a dielectric discontinuity (created by media surface), part of the energy is reflected. The greater the dielectric difference, the greater the amplitude (strength) of the reflection.

In the SITRANS LG200 transmitter, a waveguide with a characteristic impedance in air is used as a probe. When part of the probe is immersed in a material other than air, there is lower impedance due to the increase in the dielectric. When an EM pulse is sent down the probe and meets the dielectric discontinuity, a reflection is generated.

##### Equivalent Time Sampling (ETS)

ETS (Equivalent Time Sampling) is used to measure the high speed, low power EM energy. ETS is critical in the application of TDR to vessel level measurement technology. The high speed EM energy (1000 ft/ $\mu$ s) is difficult to measure over short distances and at the resolution required in the process industry. ETS captures the EM signals in real time (nanoseconds) and re-constructs them in equivalent time (milliseconds), which is much easier to measure with today's technology.

ETS is accomplished by scanning the waveguide to collect thousands of samples. Approximately 8 scans are taken per second; each scan gathers more than 30,000 samples.

##### Interface Detection

The SITRANS LG200, when used with the Model 7ML1301-6 coaxial probe, is a transmitter capable of measuring both an upper level and an interface level. The upper liquid must have a dielectric constant between 1.4 and 5 and the two liquids have a difference in dielectric constants greater than 10. A typical application would be oil over water, with the upper layer of oil being non-conductive with a dielectric constant of approximately 2 and the lower layer of water being very conductive with a dielectric constant of approximately 80. This interface measurement can only be accomplished when the dielectric constant of the upper medium is lower than the dielectric constant of the lower medium.

**Overview**

SITRANS LG200 is a guided wave radar transmitter for short and medium range level, level/interface, and volume measurement of liquids and solids. It is unaffected by changes in process conditions, high temperatures and pressures, and steam.

**Benefits**

- Coaxial, rigid, and flexible single or twin rods for many applications
- Measures accurately on materials with dielectric (dK) as low as 1.4
- Guided wave radar measurement for up to 2.5 mm (0.12") accuracy
- Measures level and interface on challenging applications including foam
- 3 button programming for quick setup
- Reliable level measurement on harsh applications with pressure up to 430 bar g (6250 psi g) and temperatures as high as +427 °C (+800 °F).

**Application**

SITRANS LG200 provides accurate measurement in level, volume, and interface applications. For short and extended applications, LG200 offers coaxial, single or twin rod probes, and single or twin cable probes up to 22.5 m (75 ft).

SITRANS LG200 measures accurately in liquid or slurry applications of corrosive vapors, foam, saturated steam, high viscosity, quick fill/empty rates, low levels and varying dielectrics and product densities.

Ideal for retrofitting torque tube applications, SITRANS LG200 chamber replacement probe can be mounted in existing chambers or cages for optimal measurement.

- Key applications: hydrocarbon processing, interface/level measurement, low dielectric liquids, high temperature/pressure applications, powdered solids with high angle of repose.

## Continuous level measurement - Guided wave radar transmitters

### SITRANS LG200

#### Configuration

##### Mounting on a nozzle

##### Single Rod mounting:

1. Do not mount in nozzles <math>< 50\text{ mm}</math> (2") in diameter.
2. Mount in applications where ratio of diameter to length is 1:1 or greater. Any ratio less than 1:1 (ie: 2"x6" nozzle = 1:3) may require a blanking distance and/or dielectric adjustment.
3. Do not use pipe reducers.
4. Keep conductive objects away from probe to ensure proper performance.

Probe can be stabilized at the bottom with a non-metallic cup or bracket.  
When mounting into a metallic cup or bracket, use optional TFE bottom spacer (7ML1930-1DJ).

##### Twin Rod mounting 7ML1302-x:

1. Active rod must be mounted at least 25 mm (1") away from any obstructions.
2. Minimum stillwell or nozzle diameter for probe is 76 mm (3"), inactive part needs to be flush with inside tank wall.

##### Installation in non-metallic silos<sup>1)</sup>

For installation in vessels of a non-metallic construction or possibly open vessels, a suitable launch plate is required to optimize the impedance of the transmitted signal as it travels along the probe. Optimal performance cannot be guaranteed if a suitable transition is not available at the process connection.

When using single rod versions (flexible or solid) and a threaded process connection, a metal sheet or flange will greatly improve conditions as this provides a suitable launch plate.

A flanged process connection is generally accepted to be provision of this launch plate.

<sup>1)</sup> See Electromagnetic compatibility

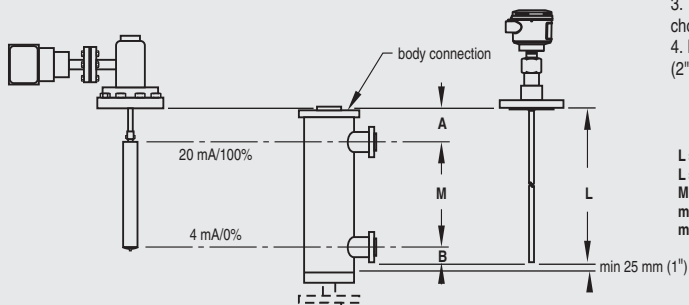

##### Coaxial 7ML1301-x/Coaxial-Interface 7ML1301-6

1. Minimum 25 mm (1") from tank bottom
2. Minimum 2" process connection for enlarged coaxial probe
3. Distance to obstructions not important due to enclosed design

##### Displacer/Torque Tube Replacement

1. With Coaxial Probe 7ML1301-4 there is no top transition zone allowing measurement to the process connection.
2. Minimum pipe size: coaxial probes 2"/DN50, twin rod 3"/DN80, single rod 2"/DN50
3. 22 mm (0.875") Coaxial probes should be used where limited build up is expected.

##### Bypass pipe

1. Minimum pipe diameter 50 mm (2")
2. Minimum 25 mm (1") from bottom of the bypass pipe
3. Take note of bottom transition zone for chosen probe, see probe type table
4. For pipe diameters less than 50 mm (2") consult factory

$L = A + M + B$   
 $L$  = probe insertion length  
 $M$  = measuring range  
 min. 300 mm (11.81")  
 max. 5700 mm (224")

SITRANS LG200 installation

## Design

Weight of transmitter with solid lid 1.28 kg (2.83 lbs)

Weight of transmitter with glass window lid 1.60 kg (3.52 lbs)

## Materials

• Enclosure Aluminum, epoxy-coated

• Degree of protection Type 4/NEMA 4, IP65

• Cable inlet 2x M20x1.5 or 2 x 1/2" NPT

## Process connections

• Threaded G 3/4" [(BSPP), EN ISO 228-1], 1", 1 1/2", 2" NPT [(Taper), ANSI/ASME B1.20.1] and G 2" [(BSPP), EN ISO 228-1]

• Flanged 3/4" to 4", ASME, DIN flanges

• Hygienic 3/4" to 4", Triclover

## Programming

Local Three button, menu-driven data entry with security passwords

Remote SIMATIC PDM via HART

**Power** 11 to 36 V DC

## Certificates and approvals

| <b>Coating/buildup</b>                       | Yes, maximum error 3% of coated length with conductive media<br>Bridging not recommended. <sup>4)</sup> |  |   |
| <b>Foam</b>                                  | Yes   | Yes  | Yes   |
| <b>Corrosives</b>                            | Yes   | No   | Yes   |
| <b>Sanitary</b>                              | No  | No   | No  |
| <b>Overfill</b>                              | No  | No   | No  |

<sup>1)</sup> See O-ring Selection Guide for guidance

<sup>2)</sup> Transition zone is dielectric dependent: dK = dielectric permittivity. Unit will function but accuracy will decrease in Transition Zone

<sup>3)</sup> Refer to Ambient Temperature vs Process Temperature graphs or instruction manual

<sup>4)</sup> Bridging is defined as continuous accumulation of material between the probe elements

#### O-ring and Seal Selection Guide

| <b>Material</b>                         | <b>Recommended for Use in:</b>   | <b>Not Recommended for Use In:</b>  |
|---|--|---|
| <b>Viton GFLT</b>                       | General purpose, steam, ethylene   | Ketones (MEK, acetone), skydrol fluids, amines, anhydrous ammonia, low molecular weight esters and ethers, hot hydrofluoric or chlorosulfuric acids, sour HCs |
| <b>EPDM</b>                             | Acetone, MEK, skydrol fluids   | Petroleum oils, di-ester base lubricants, propane, steam, anhydrous ammonia   |
| <b>Kalrez (4079)</b>                    | Inorganic and organic acids (including HF and nitric) aldehydes, ethylene, glycols, organic oils, silicone oils, vinegar, sour HCs   | Black liquor, hot water/steam, hot aliphatic amines, ethylene oxide, propylene oxide, molten sodium, molten potassium, anhydrous ammonia                      |
| <b>Aegis PF128</b>                      | Inorganic and organic acids (including HF and nitric) aldehydes, ethylene, glycols, organic oils, silicone oils, vinegar, sour HCs, steam, amines, ethylene oxide, propylene oxide | Black liquor, Freon 43, Freon 75, Galden, KEL-F liquid, molten sodium, molten potassium, anhydrous ammonia  |
| <b>Borosilicate (HT/HP probes only)</b> | General high temperature/high pressure applications, hydrocarbons, full vacuum (hermetic), anhydrous ammonia   | Hot alkaline solutions, HF acid, media with pH>12   |

### SITRANS LG200

#### Selection and Ordering data

Order No.

##### SITRANS LG200 Single Rod Rigid Probes

C) 7ML1303-

SITRANS LG200 single rod rigid probes are used in applications where coating and buildup are likely. Used in applications with dielectric constant  $\geq 10$ , or  $dk > 1.9$  when installed within 2 to 6" of a metal tank wall or in cage or bridle.

#### Note:

For orders of 10 or more, please consult factory.

#### Probe Insertion Length

Add order code Y01 and plain text:  
"Insertion length ... cm"

Model option 1, 2 and Material of Construction option A: 60 to 100 cm (23.6 to 39.4")

Model option 1, 2 and Material of Construction option A: 101 to 200 cm (39.8 to 78.7")

Model option 1, 2 and Material of Construction option A: 201 to 300 cm (79.1 to 118.1")

Model option 1, 2 and Material of Construction option A: 301 to 400 cm (118.5 to 157.5")

Model option 1, 2 and Material of Construction option A: 401 to 500 cm (157.9 to 196.9")

Model option 1, 2 and Material of Construction option A: 501 to 610 cm (197.2 to 240.2")

Add order code Y01 and plain text:  
"Insertion length ... cm"

Model option 1 and Material of Construction option D: 60 to 100 cm (23.6 to 39.4")

Model option 1 and Material of Construction option D: 101 to 200 cm (39.8 to 78.7")

Model option 1 and Material of Construction option D: 201 to 300 cm (79.1 to 118.1")

Model option 1 and Material of Construction option D: 301 to 400 cm (118.5 to 157.5")

Model option 1 and Material of Construction option D: 401 to 500 cm (157.9 to 196.9")

Model option 1 and Material of Construction option D: 501 to 610 cm (197.2 to 240.2")

Add order code Y01 and plain text:  
"Insertion length ... cm"

Model option 1 and Material of Construction option F: 60 to 100 cm (23.6 to 39.4")

Model option 1 and Material of Construction option F: 101 to 200 cm (39.8 to 78.7")

Model option 1 and Material of Construction option F: 201 to 300 cm (79.1 to 118.1")

Model option 1 and Material of Construction option F: 301 to 400 cm (118.5 to 157.5")

Model option 1 and Material of Construction option F: 401 to 500 cm (157.9 to 196.9")

Model option 1 and Material of Construction option F: 501 to 610 cm (197.2 to 240.2")

Add order code Y01 and plain text:  
"Insertion length ... cm"

Model option 1 and Material of Construction option E: 60 to 100 cm (23.6 to 39.4")

Model option 1 and Material of Construction option E: 101 to 200 cm (39.8 to 78.7")

Model option 1 and Material of Construction option E: 201 to 300 cm (79.1 to 118.1")

Model option 1 and Material of Construction option E: 301 to 400 cm (118.5 to 157.5")

Model option 1 and Material of Construction option E: 401 to 500 cm (157.9 to 196.9")

C) 7ML1998-5KA11

German

C) 7ML1998-5KA31

Multi-language Quick Start manual

C) 7ML1998-5XG81

This device is shipped with the Siemens Milltronics manual CD containing the complete instruction manual library.

#### Selection and Ordering data

Order No.

#### SITRANS LG200 Chamber Replacement Probe

C) 7ML1305-

SITRANS LG200 Chamber Replacement Probe replaces existing aging torque tube transmitters. Proprietary flanges can be used with existing chambers and cages.

#### Note:

For this option, please consult factory

#### Accessories

SITRANS RD100 Remote display - see RD100 on page 5/304

SITRANS RD200 Remote display - see RD200 on page 5/306

<sup>1)</sup> Probe is always 316/316L (1.4401/1.4404) Stainless Steel construction regardless of chamber and process connection materials.

<sup>2)</sup> Available Process Connection Configuration option 1 only

C) Subject to export regulations AL: N, ECCN: EAR99

## Schematics

## SITRANS LG200 General Purpose Wiring

**Intrinsically Safe wiring**

When connecting SITRANS LG200 in Intrinsically Safe applications, install an approved IS barrier in the non-hazardous (safe) area.

**Explosion Proof wiring**

When connecting SITRANS LG200 in hazardous areas with explosion hazard, the wiring for the transmitter must be contained in Explosion Proof conduit extending into the safe area. An Explosion Proof conduit fitting is not required within 457 mm (18") of the transmitter. An Explosion Proof conduit fitting is required between the hazardous and safe areas.
