

# **Installation and Operation Guide**

Manual #69-4333-004 of Assembly #60-4334-005 Copyright © 2012. All rights reserved, Teledyne Isco Revision J, October 2017

#### Foreword

This instruction manual is designed to help you gain a thorough understanding of the operation of the equipment. Teledyne Isco recommends that you read this manual completely before placing the equipment in service.

Although Teledyne Isco designs reliability into all equipment, there is always the possibility of a malfunction. This manual may help in diagnosing and repairing the malfunction.

If a problem persists, call or e-mail Teledyne Isco technical support for assistance. Simple difficulties can often be diagnosed over the phone. For faster service, please have your serial number ready.

If it is necessary to return the equipment to the factory for service, please follow the shipping instructions provided by technical support, including the use of the **Return Material Authorization (RMA)** specified. **Be sure to include a note describing the malfunction.** This will aid in the prompt repair and return of the equipment.

Teledyne Isco welcomes suggestions that would improve the information presented in this manual or enhance the operation of the equipment itself.

Teledyne Isco is continually improving its products and reserves the right to change product specifications, replacement parts, schematics, and instructions without notice.

| 2.6 | Hardware Setup                                      |
|     | 2.6.1 Smart Sensor Setup (TIENet)                   |
|     | 2.6.2 SDI-12 Setup                                  |
|     | 2.6.3 Modbus Input Setup                            |
|     | 2.6.4 Modbus Output Setup         2-18              |
|     | 2.6.5 Modem Setup                                   |
| 2.7 | Configure Options                                   |
|     | 2.7.1 Site Setup                                    |
|     | 2.7.2 Measurement Setup                             |
|     | 2.7.2 Measurement Setup                             |
|     | 2.7.4 Equation/Trigger Setup                        |
|     | 2.7.5 Data Storage/Push Setup                       |
|     | 2.7.6 Sampler Setup                                 |
|     | 2.7.0 Sampler Setup                                 |
|     | Setup   |
|     | 2.7.8 Reset Totalizers                              |
|     | 2.1.0 Reset 10talizers                              |

| 2.7.9 Reports/History Setup          |
|--------------------------------------|
| 2.8 Administration                   |
| 2.8.1 Language Options               |
| 2.8.2 Set New Passcode               |
| 2.8.3 Update Firmware                |
| 2.8.4 Sensor Diagnostics             |
| 2.8.5 Display Signature Information  |
| 2.8.6 Display License Information    |
| 2.8.7 Gather Fault Data              |
| 2.8.8 Restore to Factory Defaults    |
| 2.8.9 Home                           |
| 2.9 USB Options                      |
| 2.9.1 Retrieve Text Reports          |
| 2.9.2 Retrieve Data                  |
| 2.9.3 Update Firmware                |
| 2.9.4 Save Current Program           |
| 2.9.5 Load Existing Program          |
|                                      |
| 2.9.6 Save Signature Information     |
| 2.9.7 Gather Fault Data              |
| 2.9.8 None of the above              |
| 2.10 Signature Data in Flowlink 2-34 |
| 2.10.1 Event Viewer                  |
| 2.11 Verifying Exported Reports      |

### Section 3 Standard Installation

| 3.1 | Introduction                                       |
|-----|--|
| 3.2 | Connecting External Devices                        |
| 3.3 | Case Bottom Cable Entries                          |
|     | 3.3.1 Cable Fittings                               |
|     | 3.3.2 Connecting TIENet Devices                    |
| 3.4 | Power  |
|     | 3.4.1 Hard Wiring                                  |
|     | 3.4.2 Line Cord                                    |
|     | 3.4.3 Power Connections                            |
| 3.5 | Mounting the Signature                             |
|     | Outdoor Recommendations                            |
|     | The Bubble Line                                    |
|     | 3.7.1 Standard Bubble Lines                        |
|     | 3.7.2 Comparing Vinyl and PTFE Bubble Lines        |
|     | 3.7.3 Bubble Line Length                           |
|     | 3.7.4 Attaching the PTFE Bubble Line               |
|     | 3.7.5 Attaching the Vinyl Bubble Line              |
|     | 3.7.6 Installing the Bubble Line                   |
|     | 3.7.7 High-Velocity Flow Streams                   |
|     | 3.7.8 Stilling Wells                               |
|     | 3.7.9 Flume Bubble Line Fittings                   |
|     | 3.7.10 Bubble Line Extensions                      |
|     | 3.7.11 Open Channel Installation                   |
| 3.8 | Setting the Level                                  |
| 3.9 | TIENet Sensor Installation in a Hazardous Location |
| 5.5 |  |

### Section 4 Portable Installation

| 4.1 | Introduction                                | <b>4-1</b>  |
|-----|---|-------------|
| 4.2 | Portable Stand 4                            | 4-1         |
|     | 4.2.1 Adjust Signature to Upward Position 4 | <b>1-</b> 2 |
| 4.3 | Power                                       | <b>1-</b> 4 |

|     | 4.3.1 Power Connections  | 4-4 |
|-----|--|-----|
|     | 4.3.2 Outdoor Recommendations                                  | 4-4 |
|     | 4.3.3 Battery Installation                                     | 4-4 |
| 4.4 | Battery Life Expectancy  | 4-6 |
|     | 4.4.1 Major Standard Equipment Settings Effecting Battery Life | 4-6 |
|     | 4.4.2 Major Optional Equipment Settings Effecting battery Life | 4-7 |
|     | 4.4.3 Additional Considerations for Battery Life               | 4-7 |
|     | 4.4.4 Calculating Average Current Draw                         | 4-9 |
|     | 4.4.5 Battery Life Calculations 4                              | -10 |
|     | 4.4.6 Low Battery Cut Off and Battery Care 4                   | -11 |
| 4.5 | Connect to External Devices                                    | -12 |
|     | 4.5.1 Connecting Devices to the TIENet Receptacle 4            | -12 |

# Section 5 Equipment Options

| 5.1 AC Power Cord Kit /AC Wiring (Applies to Permanent Installation Only) 5-2 |
|---|
| 5.2 Battery Backup (Applies to Permanent Installation Only) 5-4               |
| 5.3 Power Loss Alarm  |
| 5.4 Mechanical Totalizer  |
| 5.5 External Desiccator   |
| 5.6 TIENet <sup>®</sup> Devices   |
| 5.6.1 Ultrasonic Level Sensor 5-12  |
| 5.6.2 Bubbler Level Sensor 5-18   |
| 5.6.3 Laser Doppler Velocity Sensor   |
| 5.6.4 Continuous Wave Doppler Velocity Sensor                                 |
| 5.6.5 Sampler Interface   |
| 5.6.6 pH and Temperature Device 5-18  |
| 5.6.7 TIENet Expansion Box 5-18   |
| 5.6.8 Contact Output Card   |
| (TIENet  304)   |
| 5.6.9 Analog Input Card   |
| (TIENet 307)  |
| 5.6.10 Analog Output Card (TIENet 308) 5-28                                   |
| 5.7 Isco Flowlink Software  |
| 5.8 Ethernet Modem  |
| 5.8.1 Ethernet Modem Configuration  |
| 5.8.2 Network Firewall Settings 5-32  |
| 5.9 Cellular Modems   |
| 5.9.1 CDMA Modem  |
| 5.9.2 GSM Modem   |
| 5.9.3 Installing the Cellular Modem 5-34                                      |
| 5.9.4 Cellular Modem Configuration  |

### Section 6 Maintenance and Servicing

| 6.1 Maintenance                           |
|---|
| 6.2 Cleaning                              |
| 6.3 Firmware Updates                      |
| 6.4 Accessing the Interior                |
| 6.5 Desiccant                             |
| 6.5.1 Internal Desiccator                 |
| 6.5.2 External Desiccator 6-6             |
| 6.6 Troubleshooting                       |
| 6.6.1 Signature Flow Meter 6-8            |
| 6.6.2 TIENet 300 Connector Case 6-11      |
| 6.6.3 TIENet 301 pH/Temp 6-11             |
| 6.6.4 TEINet 304 Contact Output Card 6-12 |
| 6.6.5 TIENet 307 Analog Input Card 6-13   |
|   |

|      | 6.6.6 TIENet 306 Sampler Interface  | 6-14 |
|------|-------------------------------------|------|
|      | 6.6.7 TIENet 308 Analog Output      | 6-14 |
|      | 6.6.8 TIENet 310 USLS               | 6-15 |
|      | 6.6.9 TIENet 330 Bubbler            | 6-16 |
| 6.7  | 330 Bubbler Installation            | 6-19 |
|      | 6.7.1 Preparation: Non-Bubbler      | 6-19 |
|      | 6.7.2 Preparation: Existing Bubbler | 6-20 |
|      | 6.7.3 Installation Procedure        | 6-21 |
| 6.8  | Front Cover Replacement             | 6-24 |
| 6.9  | System Reset                        | 6-24 |
| 6.10 | ) Service and Repair                | 6-25 |
|      |                                     |      |

General Warnings

Before installing, operating, or maintaining this equipment, it is imperative that all hazards and preventive measures are fully understood. While specific hazards may vary according to location and application, take heed of the following general warnings:

## 

Avoid hazardous practices! If you use this instrument in any way not specified in this manual, the protection provided by the instrument may be impaired.

# 

Éviter les usages périlleux! Si vous utilisez cet instrument d'une manière autre que celles qui sont specifiées dans ce manuel, la protection fournie de l'instrument peut être affaiblie; cela augmentera votre risque de blessure.

Hazard Severity Levels

This manual applies *Hazard Severity Levels* to the safety alerts, These three levels are described in the sample alerts below.

# 

Cautions identify a potential hazard, which if not avoided, may result in minor or moderate injury. This category can also warn you of unsafe practices, or conditions that may cause property damage.

## 

Warnings identify a potentially hazardous condition, which if not avoided, could result in death or serious injury.

# 

DANGER – limited to the most extreme situations to identify an imminent hazard, which if not avoided, will result in death or serious injury.

| Hazard Symbols                 | The equipment and this manual use symbols used to warn of hazards. The symbols are explained below.  |  |
|--------------------------------|--|--|
|                                | Hazard Symbols   |  |
| Warnings and Cautions          |  |  |
|                                | The exclamation point within the triangle is a warning sign alerting you of important instructions in the instrument's technical reference manual. |  |
| <u>I</u>                       | The lightning flash and arrowhead within the triangle is a warning sign alert-<br>ing you of "dangerous voltage" inside the product.               |  |
| Symboles de sécurité           |  |  |
|                                | Ce symbole signale l'existence d'instructions importantes relatives au produit dans ce manuel.   |  |
| <u>Á</u>                       | Ce symbole signale la présence d'un danger d'électocution.   |  |
| Warnungen und Vorsichtshinweis | e  |  |
|                                | Das Ausrufezeichen in Dreieck ist ein Warnzeichen, das Sie darauf<br>aufmerksam macht, daß wichtige Anleitungen zu diesem Handbuch<br>gehören.     |  |
| <u>Á</u>                       | Der gepfeilte Blitz im Dreieck ist ein Warnzeichen, das Sei vor "gefährlichen Spannungen" im Inneren des Produkts warnt.                           |  |
| Advertencias y Precauciones    |  |  |
|                                | Esta señal le advierte sobre la importancia de las instrucciones del manual<br>que acompañan a este producto.                                      |  |
| <u>Á</u>                       | Esta señal alerta sobre la presencia de alto voltaje en el interior del producto.  |  |

# Signature® Flow Meter

# Section 1 Introduction

The Signature Flow Meter is designed for open channel flow monitoring applications using any combination of flow and parameter measurement technologies and sampling, depending on what is required at the monitoring site.

The bubble line is anchored in the flow stream at the appropriate measuring point in the weir, flume, or other open channel flow situation. Air slowly bubbles out of the line into the flow stream. The pressure in the bubble line is proportional to the liquid level in the flow stream, and the flow meter measures this pressure, sensing the liquid level. The Signature has built-in standard level-to-flow conversions that cover the majority of open channel flow measurement situations. Flow measurement is usually a calculation based on a known relationship between liquid level and flow rate. Additionally, the Signature can calculate flow using standard open channel level-to-flow and area-velocity conversions, as well as equations, or data points, depending upon the measurement device(s) attached to the meter and the program specified by the user.

### 🗹 Note

Recent enhancements have been made to the Signature Flow Meter. Many of these features are standard for all new Signature units which are identifiable by the serial label mounted on the bottom of the unit (PN 60-4304-065).

Figure 1-1 Signature Flow Meter

#### 1.1 Quick Start

| 1.2 Data Integrity          | What makes the Signature Flow Meter unique is its ability to<br>verify data integrity. This is accomplished by logging four special<br>event data types that cannot be altered, and are designed to alert<br>the user to any trends or anomalies, and to assess compliance.<br>This data can be downloaded from the flow meter and observed<br>in tabular or graphical format alongside regular site data, using<br>Flowlink software (see Section 2.10 <i>Signature Data in Flowlink</i> ). |
|-----------------------------|--|
|                             | The data can also be downloaded onto a flash drive via the micro-USB assembly on the front panel of the flow meter, then imported into a spreadsheet or other viewing application (refer to Section 2.9 <i>USB Options</i> for more information).  |
|                             | The four event data types are:   |
|                             | <b>Program Report –</b> Tracks changes to the Signature Flow Meter configuration   |
|                             | <b>Summary Report –</b> Documents summaries of data measurements (e.g., Min/Max/Avg)   |
|                             | <b>Diagnostic Report –</b> Tracks results from diagnostic tests  |
|                             | <b>History Report –</b> Tracks user and meter events (e.g., level adjustments, data push, etc.)  |
| 1.3 Security                | The Signature Flow Meter can be secured shut with a padlock with the hasp on the right side of the housing (refer to Figure 1-3). The program settings and recorded data can be protected by a user-selected passcode (refer to Section 2.8.2 <i>Set New Passcode</i> .  |
| 1.4 Compatible<br>Equipment | The Signature Flow Meter can interface with a variety of mea-<br>surement devices and other system components, depending on<br>site requirements.  |
|                             | Measurement devices for flow and water quality can be con-<br>nected to the same Signature Flow Meter and run simultane-<br>ously with TIENet <sup>®</sup> connectivity (up to nine TIENet devices).<br>The flow meter can also communicate with an optional Teledyne<br>Isco wastewater sampler and rain gauges.  |
|                             | For descriptions of interfacing and parameter sensing TIENet devices, refer to Section 5 <i>Equipment Options</i> . Each external TIENet device comes with its own user manual.  |
|                             | The Signature is capable of receiving data from devices using Modbus ASCII or Modbus RTU protocol.   |
|                             | A variety of application-specific accessories are available from<br>Teledyne Isco. Refer to Appendix B <i>Options and Accessories</i> for a<br>complete list with ordering information.  |
|                             | A basic Signature system has one or more TIENet devices for<br>flow and/or parameter measurement connected to the Signature<br>Flow Meter (up to nine TIENet devices at once). Other configura-<br>tions may include an enclosure and additional internal or<br>external devices, including analog output cards, analog input<br>cards, contact output cards, a modem, up to two SDI-12 inputs,<br>and Modbus devices.   |

When connected remotely via modem, the web interface of the Signature Flow Meter provides remote control and data access.

Figure 1-2 Multiple options can be used in any combination

Figure 1-3 Front and exterior component identification

Figure 1-4 Home screen and basic keypad functions

Below the display are three software configured function keys (softkeys) that are used to make selections and navigate through menus. Their specific functions are dependent upon what operation you are performing, and will appear in the display window.

| 1.6.2 Display and LED           | The LED on the front panel is aligned next to the Status line on<br>the display screen.  |
|---------------------------------|--|
|                                 | • A green light indicates that new information is available for viewing in the Status line.  |
|                                 | • A flashing green light indicates low power mode when the screen is off and data traffic on some channels.  |
|                                 | • A red light indicates a warning or a user-defined alarm condition, with further details viewable by pressing the Alarm softkey (C).                          |
|                                 | Figure 1-4 shows the standard home screen, or run screen.  |
|                                 | Displayed menus and programming steps are explained in Section 2 <i>Setup and Programming</i> .  |
| 1.6.3 Backlight and Screen      | There is an option to turn off the backlight and screen.   |
| 1.6.4 Display Contrast          | The contrast of the LCD screen can be adjusted using the keypad.   |
|                                 | To adjust the contrast, hold down the ± key 🛨 and repeatedly   |
|                                 | press the down arrow (softer) or the up arrow (sharper) to achieve the desired appearance.   |
| 1.7 Technical<br>Specifications | Table 1-1 provides technical specifications for the Signature Flow<br>Meter. Table 1-2 provides technical specifications for the TIENet<br>330 bubbler module. |

# Signature® Flow Meter

# Section 2 Setup and Programming

The Signature Flow Meter is shipped from the factory with a default program already configured. The Signature Portable is shipped with different defaults than the Signature. Your particular installation will normally require different program settings, specific to your monitoring site and application.

This section of the manual explains the Signature's operating modes, and provides instructions for site setup and programming. Programming may be performed before transportation to the installation site.

2.1 User Interface The Signature Flow Meter can be set up, programmed, and interrogated directly through the keypad and display screen, or remotely using a computer equipped with Teledyne Isco's Flowlink® software, with either a USB cable or optional modem.

The Signature Flow Meter has its own browser, accessed via Flowlink, that mirrors the physical keypad and display.

#### 2.1.1 Keypad Functions

The following briefly explains the basic function of each key.

The numerical keys are for entering values during setup/programming.

**B** The large softkeys (A, B, and C) perform whatever function is currently displayed above them. Note that pressing the BACK softkey (A) will discard any changes you have made without saving.

The arrow keys are for navigating to different areas onand off-screen. The up/down arrows navigate a single line at a time.

From the home screen, the Enter key is used to adjust or configure the currently highlighted parameter.

From programming screens, the Enter key confirms selections and entries you have made, opens the setup/programming screen for a highlighted parameter, displays the character grid for alphanumeric entry, displays a calendar for date selection, or displays the pull down menu for a highlighted field.

#### Mote

Enter is for selection only. The NEXT softkey is for selection *and* advancement to a subsequent step.

The home key returns the flow meter to the home screen from any other screen.

The delete key clears the last character entry, exits a pull down list, or closes an open window.

In addition to typing the decimal/period, this key can be used to navigate up one screen at a time.

The ± key can be used to navigate down one screen at a time, and also to adjust screen contrast, when used with the up/down arrow keys.

2.1.2 Connecting to the Signature with Flowlink With Flowlink software version 5.15.XX or later, you can set up, program, and download data from the flow meter through its browser. Connection between the flow meter can be direct, through the micro-USB assembly on the front panel, or remote, with an internal cellular or ethernet modem.

USB Driver for Signature In order for your computer to connect to the Signature flow meter through the micro-USB assembly, you must have the correct driver installed. USB drivers for both 32-bit and 64-bit operating systems are included with your flowlink program.

To install the driver:

After installing Flowlink, navigate to its program directory, and then to the USB Driver folder, typically at C:\Program Files\Flowlink 5.1\USB Driver.

Here you will find two drivers:

4300Driver\_x64.msi for 64-bit operating systems and 4300Driver\_x86.msi for 32-bit operating systems.

Without the Signature connected to your computer, begin running the appropriate file for your operating system. When prompted, connect the Signature to your computer's micro-USB assembly. You should see a message in the lower right corner stating that new hardware has been found at the appropriate com port number.

Ensure that the Signature flow meter is connected to the computer before launching Flowlink.

Connect windowYou can connect with the Connect window, or if you have con-<br/>nected with this site before, highlight the Signature site file in<br/>the workspace (left column in Flowlink) and select<br/>Item > Connect.

In the Connect window, select the Type of connection.

| Connect   |                       |                      |                  |                            |                          |

Figure 2-1 Flowlink Connect screen

**Direct connection** is made through the micro-USB assembly. From the COM Port pull down list, select the port associated with the Signature.

**TCP connection** is made from the computer to the Signature flow meter's optional CDMA, GSM, or Ethernet modem. Enter the correct static IP and port number, separated by a colon, the correct public domain address.

If you do not want the flow meter matched with an existing site in the database, select the Create new site check box. (If this is the first time the flow meter is connected to Flowlink, a new site will be created automatically.)

Then click the large button under the heading Signature Series.

Site Screen

The Signature site screen has three tabs:

**Site Info** contains information specific to this site. Enter all relevant information into the Site Info fields, including the desired Site Name, and save the information by clicking Apply.

| Isco Test Site  |  |   |

#### 2.2 The Home Screen

The home screen, or run screen, is displayed when the flow meter is in normal operating mode. This screen shows the current parameter readings and system status or alarm conditions.

A scroll bar on the right of the screen indicates there are more parameters off-screen that can be viewed by scrolling up or down.

| Site Name   | <u>e Here</u> |              |
|---|---------------|--------------|
| Total Flow  | V             | <b></b>      |

Figure 2-5 Home screen (normal operating mode)

| 2.3 Shortcuts         | The Shortcuts menu provides quicker access to most commonly<br>used commands, such as level adjustment or viewing data<br>recorded over a period of time. Not all menu items described in<br>this section will necessarily appear in your Shortcuts menu. The<br>selections available in the Shortcuts menu are determined by<br>what connected devices have been detected by the Signature flow<br>meter. To access your shortcuts, press SHORTCUTS ( |
|-----------------------|--|
| 2.3.1 Adjust Level    | To set a new level, enter the value in the field next to Level, and select Adjust. To update the current reading, select Update.   |
| 2.3.2 Adjust Velocity | This selection will open the velocity grid with current readings<br>and laser controls for the TIENet LaserFlow velocity sensor. For<br>complete information about this device, refer to the TIENet 360<br>LaserFlow user manual.  |
| 2.3.3 Purge           | The Signature Bubbler flow meter allows you to manually purge<br>the bubble line if an obstruction is suspected.   |
| 2.3.4 Histograph      | The histograph displays the measurements taken of up to three<br>selected parameters in graphical format, beginning at your<br>selected date/time, and spanning one to 48 hours. Enter a value<br>in the Threshold field for a reference line. The measurements<br>available for graphing are determined by what measurements<br>are set up for data storage.  |

| 2.3.5 Real-Time<br>Measurement         | The Real-Time Measurement will display the sensor/card options<br>that are available. Once one is selected, a table will be displayed<br>showing the different types of measurements the sensor/card is<br>collecting.                                      |
|--|---|
| 2.3.6 Report View                      | Reporting is set up from the Configure Options menu. <b>Summary</b> displays summaries of data measurements (i.e., Min/Max/Avg). <b>History</b> tracks user and meter events. <b>Program</b> tracks changes made to the flow meter's program configuration. |
| 2.4 Programming                        | To access the setup/program menus, press MENU (B).  |
|  | When you press MENU, the four top menu options appear:  |
|  | <i>Hardware Setup</i> detects all devices connected to the flow<br>meter, establishes proper communication with them, and<br>allows configuration of each device.   |
|  | <i>Configure Options</i> sets up the measurement site and program parameters.   |
|  | <i>Administration</i> dictates operating preferences and perform general housekeeping tasks.  |
|  | Home returns to the home screen.  |
|  | Additionally,   |
|  | USB Options appears when a flash drive is connected to<br>the micro-USB assembly in the lower left corner of the con-<br>trol panel.  |
|  | The program menus consist of steps and substeps. During pro-<br>gramming, available subordinate menu content and steps will be<br>determined by what you have previously entered, and what<br>optional equipment is connected to the Signature flow meter.  |
| 2.4.1 Off-Screen Content<br>▲ ▼ ▲<br>▼ | An arrow in the lower right corner of the flow meter's screen (see<br>symbols at left) indicates that there is additional content on this<br>screen in the direction the arrow is pointing. Use the arrow keys<br>to access this content.                   |
| 2.4.2 Character Grid                   | A small grid icon in the lower right corner of the flow meter's screen (see symbol at left) indicates that the character grid is available.   |
|  | Whenever you need to enter characters, such as letters, numbers, or punctuation, press Enter to display the character grid (Figure 2-6).  |
|  | Use the arrow keys to navigate to the desired character and press Enter to select. When you are finished editing, select DONE and press Enter.  |

Figure 2-6 Character grid

Fields with a pull down arrow next to them (see example at left) indicate a pull down list. Use the arrow keys to navigate between fields on the screen; when you highlight a pull down field, press Enter to display the items on the list. Then use the arrow keys and Enter to select from the list.

Figure 2-7 Menu Tree: Top menu

Figure 2-8 Menu Tree: Hardware Setup

| 2.6.1 Smart Sensor Setup<br>(TIENet) | This selection will display the most recently detected TIENet devices connected to the Signature flow meter.  |
|--------------------------------------|---|
| Perform Scan                         | If TIENet devices have been added or removed from the system,<br>highlight Perform Scan and press Enter to detect the current<br>system configuration.  |
| Sensor Differences                   | If there are any differences in the device configuration since the last scan, a list of Sensor Differences will appear.   |
|                                      | <b>Missing Sensors</b> – The Missing Sensors list will indicate any previously connected devices that are no longer detected. Select <b>Retain</b> to keep the identification information for a previous device; select <b>Remove</b> to delete it. |
|                                      | <b>Replaced Sensors –</b> The Replaced Sensors list displays any<br>newly added sensors that have replaced Missing Sensors that<br>have been Retained.  |
|                                      | Additional Sensors – Displays any newly detected devices.   |
|                                      | Following a scan, selecting NEXT from Sensor Differences will navigate to Configure Measurements.   |
| Configure Measurements               | Navigate to Configure Measurements to begin setting up mea-<br>surement parameters for each TIENet device detected.   |
|                                      | To activate a measurement, highlight the radio button next to it<br>and press Enter. To change the name of the measurement, high-<br>light the name and press Enter.  |
|                                      | <b>Regardless of what you name them, the measurement</b><br><b>parameters for each device remain the same.</b> For your ref-<br>erence, Figure 2-9 on the following page shows the position of<br>each measurement for each type of TIENet device.  |

300 Case Board:

### 360 LaserFlow Sensor:

Velocity Signal

| Distance          | Ultrasonic Signal | Case Temperature    | Air Temperature |
|-------------------|-------------------|---------------------|-----------------|
| Velocity          | Sense Voltage     | X-Axis              |                 |
| Laser Temperature | Doppler Power     | Laser Diode Current |                 |
| Y-Axis            | Level             | Window Temperature  |                 |

Figure 2-9 Measurement parameters for each TIENet device

Velocity Spectrum

| 2.6.2 SDI | - | Sondes detected since the last scan are displayed, with the activated sondes in the top box. If SDI-12 devices have been added or removed from the system, select Scan to detect the current system configuration. Following the scan, add/remove sondes from the Active list by selecting the sonde and clicking Add or Remove. To begin using an Isco-Ready sonde with its configured parameters, select Configure. |
|-----------|---|---|
| 2.6.3 Moc |   | Connect the external Modbus input device at one of the three<br>TIENet terminal connectors on the Signature case board as<br>described below:   |
|           |   | Modbus In<br>D1 = Yellow (+)<br>D0 = Brown (-)<br>Gnd = Black   |
|           |   | Table 2-1 on the following page provides an example of Modbus settings for a connected DGH analog converter. The letters in the left column correspond to the entry fields shown in Figures 2-10 and 2-11.  |
|           |   | The <b>multiplier</b> and <b>offset</b> are used to scale the raw number<br>coming from the Modbus register(s) to represent the data in the<br>units of measure you specify, as expressed in the following<br>equation:   |
|           |   | <b>H</b> in units of measure = (register value $* J$ ) + <b>K</b> .   |
|           |   | In this example, the current input represents a flow rate where:<br>4mA = 0cfs, and $20mA = 10,000cfs$  |
|           |   | The D1252M documentation states that it produces a register value of 0 at 0mA, and 65535 at 25mA. This means that at 4mA the register will report 10485, and at 20mA it will report 52428.  |
|           |   | The multiplier (J) is calculated as follows:  |
|           |   | 10,000/(52428 - 10485) = -2500  |
|           |   | Before setting up the Modbus input function, it is recommended<br>that you print Table 2-1 and use the empty columns provided on<br>the right to fill in your own Modbus information.   |

|          | Examples:                        |                   | Table 2-             | 1 Modbus | s Setup Worksheet    |  |

a. For 2100 update interval in seconds must be written to register 26.

b. For assistance in calculating a multiplier and offset, contact Teledyne Isco.

c. Big Endian = Most significant register first; Little Endian = Least significant register first.

To begin configuring Modbus communication protocol and devices, select MODBUS Input COM Settings and use the pull down menus.

Add/Edit Device

Select Modbus Input Device Settings. Enter the device name, and the device address. For Request Timeout, enter a connection retry interval in milliseconds, and the number of attempts before a connection failure is determined.

Configure Modbus communication protocol using the pull down menus. To add/edit parameter(s) for the device, select Edit Parameters.

Figure 2-10 Modbus Input Setup

### Mote

External Modbus RTU devices cannot use addresses 1 through 10.

*Add/Edit Parameters* Select an existing parameter to edit, or select Add to add a new parameter for the device. Enter a name (such as a data type), and the register address. Use the pull down menus to select other parameters.

Select Little if a multiple register parameter has the low-order data in the first register; select Big if high-order. Select data size. The available Units of Measure are determined by the data type you select.

If necessary, enter a Multiplier and Offset so the register reports a value in the units specified.

Figure 2-11 Editing Modbus device parameters

### 2.6.4 Modbus Output Setup

The Modbus RS-485 output function enables a SCADA system to retrieve site data from the flow meter. Connection to the flow meter is made via the RS-485 terminal on the Signature case board (shown in Figure 2-12 below).

In the **Device ID** field, enter the Signature's address (from 2 to 247) and configure the communication protocol.

### 

Be careful not to assign the same address to more than one flow meter.

For Modbus data register numbers and definitions, as well as a general explanation of Modbus output protocol, refer to Table C-1, in Appendix C *Modbus Output Protocol*.

Figure 2-12 Modbus Output Setup

### 2.6.5 Modem Setup

The menu choices displayed for modem setup depend on which modem option is installed in the flow meter. For detailed information about installation and operation of Ethernet, GSM, and CDMA modems, refer to Sections 5.8 *Ethernet Modem* and 5.9 *Cellular Modems*.

2.7.1 Site Setup

The Site Setup menu sets some basic operating characteristics specific to the site.

Set Clock - Enter Year, Month, Day, Hour, Minute.

**Site Name –** Press Enter to display the character grid. Select one character at a time to create the desired site name.

**Home Display –** The Home Display determines how current measurement data is displayed on the Home screen.

From the Measurements Setup screen, select all measurement parameters to be displayed. The parameters available in the pull down menus will be determined by what devices are connected to the Signature meter.

**Default Units –** To set units of measure for each parameter, first select the parameter from the menu list.

The available units of measure that appear will be determined by the parameter you have selected. Under Units, highlight the units of measure and press NEXT. When finished, press NEXT again to save and exit.

Power Options - There are two power options:

- Display: will allow you to shut off the backlight and the screen.
- Low Battery Cutoff: will allow you to adjust the low battery cutoff. Refer to Section 4-4 for more power information.
- 2.7.2 Measurement Setup This menu is for setting up the level measurement (Level Input Setup), flow conversion (Flow Input Setup), and flow volume totalizer(s) (Volume Input Setup). Menu items that appear are dependent on what equipment is connected to the Signature flow meter.

**Level Input Setup –** Under Level Setup, select the level input. Usually there will only be one listed, unless your system is using more than one level measurement device.For the TIENet 310 ultrasonic sensor, the minimum blanking distance refers to the maximum water level, and the maximum blanking distance refers to zero water level in the channel. For detailed instructions about 310 setup, refer to the TIENet 310 Installation and Operation Guide.

For the TIENet 330 bubbler, the purge function is a periodic burst of air forced through the bubble line to keep it free of debris. Select the purge interval between 15 minutes and 8 hours from the pull down menu. -

**Flow Rate Input Setup** – Measurement settings and flow conversion are programmed for the flow rate(s) from this menu (refer to Figure 2-14 on the following page). If more than one flow rate data set is being calculated, these settings are programmed separately for each one.

1. Select the flow rate to configure or select "Add Flow Rate" when two or more flow rates are present. Adding a flow rate enables calculation of flow rates dependent on condition. The flow rate also allows for configuring standard flow conversions from level inputs (e.g. level from Analog Input).

- 2. For level-to-flow conversions, from Measurement Settings, select the Level Input to be used in the flow calculation and the Measurement Rate (interval). Enter the name for this flow rate.
- 3. Select the flow conversion type to be used (Weir, Flume, Metering Inserts, Manning Formula, Area Velocity, Equation, or Data Points); then set up the conversion.

# 🗹 Note

Additional information about flow conversions can be found in the *Isco Flow Measurement Handbook* included with the Signature Flow Meter.

Figure 2-14 Menu Tree: Flow rate input setup

**Volume Input Setup** – You can set up one to four Total Flow measurements. Select the flow rate(s) used for total volume, the totalizing method (Net, Positive, or Negative), and the interval at which the total flow will be updated (between 30 seconds and 24 hours).

From the Resolution pull down menu, select the degree of resolution required for your total flow (lower = fewer digits to right of decimal; higher = more digits to right of decimal).

Figure 2-15 Menu Tree: Volume Input Setup (total flow)

**Rainfall Input Setup** – This option allows you to setup the per tip options for the rain gauge. The Automatic roll-over can be set to the time of day the rollover occurs. Once this number is reached, the roll-over will go back to zero.

| <u>300 Rainfall</u>                 | Ň |
|-------------------------------------|---|
| SELECT RAINFALL PER TIP             |   |
| ● 0.01 inch                         |   |

| 2.7.3 Adjust                    | Adjust levels and/or velocity measurement, and/or calibrate mea-<br>surement values for other connected TIENet devices. Level<br>adjustment instructions can be found in Section <i>Setting the</i><br><i>Level</i> , on page 3-18.   |
|---------------------------------|---|
|                                 | <b>Note</b><br>For detailed instructions on calibration of a connected TIENet 301 pH device through this menu selection, refer to the 301 user manual.  |
|                                 | <b>Note</b><br>For detailed instructions on laser velocity measurement setup through this menu selection, refer to the LaserFlow (360) user manual.   |
| 2.7.4 Equation/Trigger<br>Setup | <i>Conditions</i> are sets of site-specific, user-defined parameters.<br>Refer to Figure 2-18 on the following page.  |
|                                 | <i>Equations</i> are created from various site conditions that can be<br>used to generate alarms, log or push data at secondary rates,<br>trigger a connected sampler, or conserve power by turning on<br>equipment only when needed. |
| Types of conditions             | There are five types of conditions provided:  |

| <b>Range –</b> TRUE when a measured parameter value is inside or |
|--|
| outside specified upper and lower limits.                        |

**Rate of Change –** TRUE when a measured parameter changes by a specified amount over a specified time duration.

**Sensor Error** – TRUE when a sensor error is present for a specified time duration.

**Threshold –** TRUE when a measured parameter reaches or exceeds a user-defined setpoint.

**Time Table –** TRUE when the flow meter's internal clock is within a defined time duration. This may be a weekly, daily, or specific one-time stop/start time.

**Rain Event –** TRUE when threshold is met over a period of time. Meeting threshold during the dry period will reset the Dry Period timer.

*Defining conditions* To define a condition:

- 1. Highlight the desired condition in the lower left corner of the screen (Conditions A-F).
- 2. Highlight Edit Condition and press Enter.
- 3. Scroll down and press Enter to select the type of condition (listed above). Press NEXT to go to the configuration screen for that condition type. Press NEXT when complete.

The condition in the left-hand corner of the screen will now show the condition type.

Building equations Build or modify the equation by navigating to the desired conditions and operators. Highlight Select Condition and press Enter again to add it to the equation. Press Enter to add a highlighted operator.

Press NEXT when complete.

Measurement Interval When the screen is off and measurement interval is less than the data storage rate, the readings will be averaged and the battery life will slightly decrease.

Figure 2-18 Example of defining conditions & building equations.

### 2.7.5 Data Storage/Push Setup

**Data Storage –** Set up data storage rates for a group of measurements, or separately for individual measurements. Scroll to the bottom of the screen to set up the primary storage rate, and a secondary one, if needed, with its trigger equation.

The display can be turned OFF and ON in the configure options, site setup, and power options menu. Turning the display OFF effects the way the data is recorded by the Signature meter.

- When the display is ON the Signature takes an average of the measurements over the data storage interval and records it.
- When the display is OFF the Signature takes a reading at the reading interval set in the data storage screen (no average is taken) unless alarms, triggers, or secondary measurements are active.
- When the display is OFF and if alarms, triggers, or secondary measurements are set up and the intervals are shorter than the data storage rate, the readings recorded by the meter will be an average of readings taken when the alarms, triggers, or secondary measurements were taken.

**Data Push** – Set up the flow meter to push data to a server running Isco Flowlink Professional software (internal modem required).

Program the flow meter to trigger and pace a sampler, and receive sampling information from the sampler.

### Mote

2.7.6 Sampler Setup

For detailed instructions on configuring a connected TIENet 306 Sampler Interface through this menu selection, refer to the 306 user manual.

2.7.7 Inputs/Outputs/Alarms Setup Alarm – Configure Local, SMS text, or Server alarms based on user-defined site conditions. Under Alarm, select an alarm from the list or set up a new alarm.

Next, select an Alarm Trigger from the pull down list.

### 🗹 Note

The trigger(s) listed in the Alarm Trigger pull down list consist of equations you have already created based on your defined site conditions (refer to Section 2.7.4 *Equation/Trigger Setup*).

Alarms: LocalLocal alarms are viewed on the Signature Flow Meter itself.<br/>When a programmed alarm condition becomes true, the LED on<br/>the front panel glows red.

To view the alarm message, press the Alarm softkey (**C**).

For local alarm setup, refer to Figure 2-19 on the following page.

# Alarms: SMS / ServerSMS and Server alarms require an optional internal modem. To<br/>configure your modem for communication, refer to Section 5.8<br/>Ethernet Modem or Section 5.9 Cellular Modems.

### 🗹 Note

Server alarms notify a specified list of contacts in the event that a server running Flowlink Pro fails to receive pushed data from a site within a specified duration.

For SMS and Server alarm setup, refer to Figure 2-20.

Figure 2-19 Local alarm setup

Figure 2-20 SMS and Server alarm setup (modem required)

**Analog Output** – Select the output to configure, then select and configure the measurement the output will represent. TIENet 308 option card required (see Section 5.6.10).

**Analog Input** – Select the input to configure, then select and configure the measurement the input will represent. TIENet 307 option card required (see Section 5.6.9).

**Contact Output –** Select the output to configure, then select and configure the measurement the output will represent. TIENet 304 option card required (see Section 5.6.8).

| 2.7.8 Reset Totalizers      | Select the flow volume $totalizer(s)$ to be reset. Selection resets the totalizer to zero.   |
|-----------------------------|--|
| 2.7.9 Reports/History Setup | <b>Reports –</b> Set up report interval and measurements to include<br>for one or two reports. To include all user and meter events in the<br>report, select the option Include history log. |
|                             | <b>History</b> – Display user and meter events (i.e., log-ins, adjust-<br>ments, data push, etc.), and/or set up the graphical display for<br>selected measurements over a period of time.   |
| 2.8 Administration          | Administrative settings (see following page) dictate operating   |

| 2.9.1 Retrieve Text Reports | Select this function to download the Signature data text reports for sensor diagnostics and verification of data integrity.  |
|-----------------------------|--|
|                             | Select "All reports," or specify a start date or date range, and<br>press NEXT. The reports will be stored on the connected flash<br>drive in a folder called "ISCO."  |
|                             | This folder contains a sub-folder for each site, named with the first eight characters of the site name. The site folder contains one or more sub-folders, named by retrieval date (YYYYMMDD).   |
|                             | Each report file name has a prefix of one or two letters, followed<br>by four digits representing the time of day, e.g., PH0935.TXT is a<br>program report generated at 9:45 a.m.  |
|                             | Each report is contained in a text file, with a .TXT extension, or<br>in a Smart Sensor Diagnostic file, with a .SSD extension. Each<br>report file has a corresponding authentication file, with a .ath<br>extension, for verification purposes. For more information about<br>report verification, refer to <i>Verifying Exported Reports</i> , on page<br>2-35. |
|                             | The four validation report types are:  |
|                             | <b>Program Report (PH)</b> – Tracks changes to the Signature Meter's configuration   |
|                             | <b>Summary Report (R1 / R2) –</b> Documents summaries of data measurements (e.g. Min/Max/Avg)  |
|                             | <b>Diagnostic Report –</b> Tracks the occurrence of, and results from, diagnostic tests  |
|                             | <b>History Report (H) –</b> Tracks user and meter events (e.g. level adjustments, calibration, data push, etc.)  |
| 2.9.2 Retrieve Data         | The program settings and flow data can be downloaded onto your flash drive in .ddp (data dump) format.   |
|                             | Select "All data," or specify a start date or date range, and press<br>NEXT. The data will be stored on the connected flash drive in a<br>folder called "ISCO."  |
|                             | This file can then be imported into Flowlink, where it can be<br>viewed in regular site file format, with the recorded data and<br>report/graphing capability.   |
|                             | There is a check box that, when checked, will export the .cvs file onto a USB flash drive.   |
| 2.9.3 Update Firmware       | With a USB flash drive connected to the Signature's front panel,<br>the Update Firmware option becomes active on both the Admin-<br>istration menu and the USP Options menu.   |
|                             | For step-by-step instructions for updating the firmware for either<br>the Signature flow meter or connected TIENet devices, refer to<br><i>Firmware Updates</i> , on page 6-2.   |

| 2.9.4 Save Current Program          | Select this option to save a copy of the Signature's current<br>program to your USB flash drive. You can also use this infor-<br>mation to program other meters with the same configuration.   |
|-------------------------------------|--|
| 2.9.5 Load Existing Program         | Select this option to load a saved program from your flash drive.<br>Note that selecting this option will cause the current program to<br>be overwritten with the one from the flash drive.  |
|                                     | In order for the Signature to load the correct program, the name<br>of the site must match that of the site program that was saved.  |
| 2.9.6 Save Signature<br>Information | This option saves a snapshot of the firmware version(s) and serial number(s) of the Signature and any connected TIENet devices.  |
| 2.9.7 Gather Fault Data             | Fault data is a term describing the capture of any user and/or<br>flow meter activity prior to and during a system error or failure.<br>This data can be viewed and/or downloaded as a file to your flash<br>drive to assist in troubleshooting.                         |
| 2.9.8 None of the above             | This item returns the screen to the top menu.  |
|                                     | However, as long as the flash drive remains connected, the USB<br>Options menu will still be active, and can be reopened from the<br>Administration menu.  |
| 2.10 Signature Data in<br>Flowlink  | To download flow and event data from the Signature Flow Meter<br>into the database with Flowlink, connect to the flow meter and<br>select Interrogate (F8), or Import ddp (data dump).   |
| 2.10.1 Event Viewer                 | By default, Flowlink's Event Viewer displays the four event data types in tabular format, with a time stamp and short description of the event for each entry (refer to Figure 2-23). Each event type is represented by a graphical symbol, located in the first column: |
|                                     | Program  |
|                                     | Summary Reports 1 & 2  |
|                                     | Diagnostic   |
|                                     | History (User / Meter Actions) <b>H</b> Meter Actions include Data   |
|                                     | Push - start/fail/complete, and Power Up/Down; all other events  |

Push - start/fail/complete, and Power Up/Down; all other events are user events (i.e., calibration, changes to the program, totalizer reset, etc.). If the data for that event is unaltered, a green check mark

appears next to it. If the data cannot be verified as authentic, a red slash *O* appears next to it.

| Туре | Auth | Event Time           | Event Summary  |
|------|------|----------------------|--|
| 2    | 1    | 2/17/2011 11:00:00   | Report Signature Site Interval: 2011-02-18T06:00:00 to 2011-02-18T08:42:19 Voltage: 13.527621  |
|      | 1    | 2/17/2011 11:00:01   | Report Signature Site Interval: 2011-02-18T10:00:00 to 2011-02-18T11:11:34 Voltage: 12.8071290 |

### Figure 2-23 Event Viewer in Flowlink

| Printing reports                   | Select one or more rows in the viewer to be printed and then select the Print button.   |
|------------------------------------|---|
| Exporting reports                  | To save event data as a text report for future verification, high-<br>light the desired row(s) in the Event Viewer table and click<br>Export (or right-click and select Export).  |
|                                    | The default destination is your My Documents folder; however,<br>you can change this to another preferred destination, including a<br>USB drive, if preferred. A message window will notify you when<br>the export is complete.   |
|                                    | The files you exported are saved using the following hierarchy:   |
|                                    | SITENAME \ MODULENAME \ DATE.   |
| 2.11 Verifying Exported<br>Reports | Flowlink will only export already verified reports; they can also<br>be verified after being retrieved from the Signature, either via<br>Flowlink export or USB flash drive download.   |
|                                    | Verification of exported data reports is done using the <b>Report</b><br><b>Verification tool</b> , a small application installed separately when<br>Flowlink was installed. This tool is located in the Flowlink<br>program folder, normally at C:\Program Files\Flowlink 5.1, and |
|                                    | is identified with a traffic light icon .   |
|                                    | Note that this tool can also be used to verify data exported  |

Note that this tool can also be used to verify data exported directly to a USB drive using the USB Options menu (refer to Section 2.9).

Use the top Browse... button to navigate to the desired report (\*.txt or \*.SSD) file. Use the bottom Browse... button to navigate to its corresponding authentication (\*.ath) file. Click Verify. The application will quickly return a message showing the verification result.

Figure 2-24 Report file verifier

# Signature® Flow Meter

# Section 3 Standard Installation

This section contains physical preparation procedures and permanent mounting methods for the Signature Flow Meter and associated Teledyne Isco equipment. Section 4 will contain the installation information for the Signature Portable Flow Meter.

# 

The installation and use of this product may expose you to hazardous working conditions that can cause serious or fatal injury. Take all necessary precautions before entering a worksite. Install and operate this product in accordance with all applicable safety and health regulations and local ordinances.

### **3.1 Introduction**

3.2 Connecting External Devices The Signature Flow Meter is used for permanent installations.

External device cables and mains line cord are passed, usually via conduit or cord-grip fittings, through the port holes in the bottom of the case and wired directly to the connector case. Cable fittings are also available for Rain, Ethernet and option card circuits as a 3 hold cord grip.

Trimming unterminated wires prior to installation is recommended.

### **Tools Required:**

Small flat screwdriver (3.5mm)

#2 Phillips screwdriver

Channel locks

Soldering iron (for tinning wires)

# 

Before opening the case, first ensure that mains power is disconnected from the unit.

Before opening the case, disconnect the optional battery or battery backup power, if used.

### 🗹 Note

Before restoring mains power, ensure that the flow meter's USB connector does not have a cable attached.

Open the door to access the two large screws holding the front panel on the connector case. Remove the two screws, then reinsert them in the front panel and latch the lid so they will not be misplaced.

Figure 3-1 Open door and front panel to access interior

Open the front panel to access the connector case. Connectors on the board are identified in Figure 3-2.

|                                  | ✓ Note  |
|----------------------------------|---|
|                                  | The two TIENet connections satisfy most applications. If addi-<br>tional TIENet connections are needed, consider the two<br>TIENet Expansion Box versions for standard installations or<br>TIENet 'Y' cables for Portable Signature applications. See<br>Appendix B for ordering information. |
| 3.3 Case Bottom Cable<br>Entries | The connections made through the cable entries depend on the application, but their most common uses, in accordance with the connector case layout, are depicted on the following page.   |
|                                  | All optional cable entries must use appropriate ID conduit con-<br>nections or cord-grip fittings to retain the IP66 rating. If you are<br>using non-TIENet or non-Signature cables, you must supply the<br>appropriate ID conduit connections or cord-grip fittings.                         |
|                                  |   |

If you are using conduit instead of the cord-grip fitting, the conduit and wires must be sealed to prevent harmful gases and

moisture from entering the Signature enclosure. Failure to seal conduit could reduce equipment life.

Figure 3-3 Connector Case cable entries for power and external devices

3.3.1 Cable Fittings

Cord-grip fittings for TIENet devices, line cord, and battery backup option are available from Teledyne Isco (see Appendix B for ordering information). Cable fittings are also available for rain, ethernet, and optional card circuits as a 3-hole cord grip.

The fitting for the line cord is a special strain-relief fitting, as shown in Figure 3-5.

Figure 3-4 Strain relief <sup>3</sup>/4 NPT Cord-grip fitting for TIENet devices

Figure 3-5 Cord-grip fittings installed

Any unused cable entry holes should be sealed with plugs. Do not overtighten the plugs. When a plug is flush against the outside of the case and held in place by the metal nut inside, the hole is sealed.

Figure 3-6 Diameter-seal plugs for unused ports

# 3.3.2 Connecting TIENet Devices

The optional external TIENet devices compatible with the Signature flow meter all connect in the same manner. Multiple TIENet devices can be connected simultaneously to the same Signature Flow Meter.

# 🗹 Note

The steps that follow include instructions for installing cord-grip fittings. Some applications will use user-supplied  $^{3}/_{4}$ " ID conduit for cable routing.

1. Remove one of the 6-position plug-in terminal strip connectors from the connector case.

Figure 3-7 TIENet Device terminal strips

- 2. If using a cord-grip fitting, install the cable nut in the appropriate opening on the bottom of the Signature enclosure, securing it to the wall with the lock nut (concave side facing wall).
- 3. Feed the TIENet device cable end through the sealing nut and seal, and through the cable nut. Lightly tighten the sealing nut, just enough to hold the cable in place while installing the connector.

Figure 3-8 Installing TIENet cable with a cord-grip fitting

4. Attach the wire ends to the terminal strip as shown in Figure 3-9, then press the terminal strip back down into its socket on the case board, as shown in Figure 3-10, taking care not to strain any wire connections. Gently tug each wire when finished, to verify secure connection to the screw terminals.

# Mote

The SHIELD wire is the bare drain emerging from the foil shield around the YELLOW and BROWN wires. The BRAID-DRAIN wire is the bare drain emerging from the surrounding braided shield inside the cable jacket. It is not necessary to prevent the two braids from coming into contact with each other.

| D1      | YELLOW      |
|---------|-------------|
| D0      | BROWN       |
| Shield  | SHIELD      |
| VP      | RED         |
| Common  | BLACK       |
| Chassis | BRAID DRAIN |

All optional cable entries must use appropriate ID conduit connections or cord-grip fittings to retain the IP66 rating. If you are using non-TIENet or non-Signature cables, you must supply the appropriate ID conduit connections or cord-grip fittings.

Figure 3-9 TIENet Device terminal connections

 $Figure \ 3-10 \ Attach \ wired \ terminal \ strip \ to \ connector \ case \ socket$ 

a. Systems using the LaserFlow or Area Velocity 350 Sensor:

Insert the reference tubing into the REF AIR port on the case board, pushing it down inside the silicon tubing. Be careful not to kink the reference tubing.

Figure 3-11 Insert the cable reference tubing into the case board reference port

5. Tighten the cord grip sealing nut.

Figure 3-12 Position and secure the cable

6. Close the front panel and fasten it shut with the two Phillips screws.

### 

If you are using conduit instead of the cord-grip fitting, the conduit must be sealed to prevent harmful gases and moisture from entering the Signature enclosure. Failure to seal conduit could reduce equipment life.

| 3.4 Power               | The Signature is in compliance with North American and Inter-<br>national safety standards while the input voltage remains within<br>100-240 VAC (50/60 Hz).   |
|-------------------------|--|
|                         | For external current protection, a 2 A slow-blow or time-lag fuse<br>between mains power and the Signature is recommended to<br>accommodate up to 40 A inrush current at power up in applica-<br>tions up to 230 VAC.  |
|                         | The flow meter comes with the internal power supply wired to<br>the connector case, and held in place by a screw (see Figure 3-13<br>on the following page). Mains power is wired into the Signature's<br>internal power supply, normally via a standard three-wire line<br>cord or hard-wiring through user-supplied conduit. |
| 3.4.1 Hard Wiring       | Cable entries for hard wiring must use appropriate ID conduit connections.   |
|                         |  |
|                         | If you are using conduit instead of the cord-grip fitting, the con-<br>duit and wires must be sealed to prevent harmful gases and<br>moisture from entering the Signature enclosure. Failure to seal<br>conduit could reduce equipment life.   |
|                         | If the instrument has been hard-wired for power, ensure that a<br>switch or mains circuit breaker is installed near the instrument<br>for easy access to remove power in the event of an emergency.  |
| 3.4.2 Line Cord         | If the instrument has been fitted with a line cord, ensure that its<br>installation is near a mains outlet for easy access to remove<br>power in the event of an emergency.  |
| 3.4.3 Power Connections | Teledyne Isco offers an AC line cord kit that is installed at the<br>factory when ordered with the Signature. It is also sold sepa-<br>rately, and is easily installed by the user.  |
|                         | For installation instructions, refer to Section 5.1 AC Power Cord<br>Kit /AC Wiring (Applies to Permanent Installation Only). Note<br>that these instructions can also be used as guidance for<br>user-supplied line cord, hard wiring, or replacement<br>power supply.  |

Figure 3-13 Location of power supply

#### 3.5 Mounting the Signature

The Signature can lie flat on a horizontal surface, or be attached to a wall using the stainless steel bracket on the back of the case.

It can also be installed inside a console enclosure with other system components. If a console enclosure is used, ensure that it provided proper sealing to protect the flow meter and other equipment from harsh environments and/or moisture.

Because it uses a bubble line, the Signature does not have to be mounted directly above the primary device, or even particularly close to the flow stream. You will need to mount the unit within 25 feet (7.6 m), or 50 feet (15.3 m) if you are using the 100 foot bubble line. Distances greater than 100 feet are not recommended.

The mounting location should allow for easy removal and reinstallation in the event that cleaning, testing, or replacement is required. Refer to the dimensional drawings on the following pages for physical installation specifications.

Figure 3-14 Signature Flow Meter mounted on wall

#### 3.6 Outdoor Recommendations

Where the Signature Flow Meter is mounted outdoors, a weather shield for protection from direct sunlight and rain is recommended. The shield should accommodate the flow meter's 18 inch dimensions with the cover opened, as shown below.

Figure 3-15 Weather shield - recommended for outdoor installations (Drawing & Photo courtesy of TRACOM, Inc.)

| 3.7 The Bubble Line                            | Anchor the bubble line in the flow stream at the appropriate<br>measuring point in the weir, flume, or other open channel flow<br>situation. Air slowly bubbles out of the line into the flow stream.<br>The pressure in the bubble line is proportional to the liquid level<br>in the flow stream, and the flow meter measures this pressure,<br>sensing the liquid level.   |  |
|--|---|--|
| 3.7.1 Standard Bubble Lines                    | <ul> <li>Three different bubble lines are available for use with the Signature:</li> <li>(<sup>1</sup>/<sub>8</sub>" (0.32 cm) OD PTFE, <sup>1</sup>/<sub>1</sub>6" (0.17 cm) ID, 25 ft. (7.6 m) long)</li> <li>(<sup>1</sup>/<sub>4</sub>" (0.63 cm) OD vinyl, <sup>1</sup>/<sub>8</sub>" (0.32 cm) ID, 50 ft. (15.2 m) long)</li> <li>(<sup>1</sup>/<sub>4</sub>" (0.63 cm) OD vinyl, <sup>1</sup>/<sub>8</sub>" (0.32 cm) ID, 100 ft. (30.5 m) long)</li> </ul>  |  |
| 3.7.2 Comparing Vinyl and<br>PTFE Bubble Lines | Wherever practical, Teledyne Isco recommends the vinyl line,<br>which offers significant advantages over the PTFE line. The<br>vinyl line has a longer usable length than the PTFE line. This is<br>due to the small inside diameter of the PTFE tubing, which gen-<br>erates an undesirable friction head at lengths greater than 25<br>feet. Additionally, experience has shown that the larger ID vinyl<br>line is less likely to clog than the PTFE line when used in flow<br>streams with suspended solids. If the distance between the flow<br>meter and the measuring point exceeds 25 feet, you <i>must</i> use the<br>vinyl bubble line. |  |
|  | However, for certain installations, the smaller ID PTFE line also<br>has advantages. Due to the small inside diameter, the air volume<br>necessary (and, as a result, battery power) is minimized, a def-<br>inite advantage for battery-powered installations. Additionally,<br>almost no chemical can attack the PTFE line. Consequently, if<br>power consumption is critical, or there are known agents in the<br>flow stream that might attack the vinyl line, the PTFE line may<br>be more suitable.   |  |
| 3.7.3 Bubble Line Length                       | <ul> <li>The bubble line should be kept as short as possible. This will minimize friction head effects in the line and will also minimize the amount of line exposed to cuts, kinks, etc. Shorten the line as necessary by cutting the tubing with a sharp knife.</li> <li>Long Bubble Lines – For certain applications, you may need to use a bubble line with an inside diameter larger than that of the standard lines (for example, where the bubble line exceeds 50 feet, or where the flow stream is extremely dirty and the end of</li> </ul>  |  |
|  | the line might clog).<br>Consult the factory for specific recommendations regarding size of line, special connectors required, etc. In no case should the inside diameter of the bubble line exceed $^{1}/^{4"}$ (0.64 cm), and you should recognize that a larger bubble line will result in increased power consumption, a concern if you must power the flow meter by battery.   |  |

| 3.7.4 Attaching the PTFE<br>Bubble Line  | The PTFE bubble line attaches to the flow meter with the bubble line fitting on the bottom of the case and the silicone rubber tubing connector. The tubing connector is a short length of 0.109 inch (0.20 cm) ID, 0.192 inch (0.49 cm) OD silicone tubing attached to a barbed fitting on the case.  |  |  |
|--|--|--|--|
|  | The <sup>1</sup> /8" OD bubble line simply slips inside the silicone tubing, forming a reliable union you can join and separate without tools.   |  |  |
| Attachment                               | To attach the PTFE bubble line, first slip the 2 inch $(5.1 \text{ cm})$ length of $1/4"$ $(0.63 \text{ cm})$ ID vinyl tube included in the instrument accessory package over the end of the bubble line. Grasp the silicone tube to stiffen it and insert the end of the bubble line into the silicone tube.  |  |  |
|  | Slip the short length of vinyl tube over the union and force it over<br>the shoulder of the barbed fitting. The purpose of the short<br>length of vinyl tube is to support the union, preventing fatigue or<br>kinking of the silicone tube.   |  |  |
| Removal                                  | To remove the bubble line from the tubing connector, first pull<br>the vinyl tube off of the barbed fitting and slip it down the bubble<br>line. Grasp the end of the silicone tube and then pull the bubble<br>line straight out of the silicone tube.  |  |  |
|  | Several replacement lengths of the silicone tubing are included<br>in the instrument accessory package. Install them on the unit by<br>simply forcing the end of the tube over the barbed connector.   |  |  |
|  | <b>Note</b><br>Avoid placing tension on the silicone tube where it attaches to<br>the barbed fitting. Direct the PTFE tube straight away from the<br>fitting rather than at an angle. This reduces the likelihood of<br>tubing wear and leakage around the fitting.  |  |  |
| 3.7.5 Attaching the Vinyl<br>Bubble Line | The vinyl bubble line attaches directly to the barbed fitting. Remove the silicone tube and slip the $1/8"$ (0.32 cm) tubing over the fitting.   |  |  |
| 3.7.6 Installing the Bubble<br>Line      | Install the bubble line at the recommended level measuring poin<br>in the primary device or other open channel flow situation. If you<br>do not know where this is, consult the manufacturer of the<br>primary device.   |  |  |
|  | If you are not using a fabricated device, consult the <i>Isco Open</i><br><i>Channel Flow Measurement Handbook</i> for suggestions. Many dif-<br>ferent devices are discussed there. Proper location of the bubble<br>line outlet is necessary for accurate measurement. Normally, the<br>bubble line is positioned in the flow stream with the end at a<br>right angle to the flow.   |  |  |
|  | In many installations, it is not practical to locate the outlet of the<br>bubble line precisely at "zero" liquid level. Depending on the situ-<br>ation, the outlet end of the bubble line may be located anywhere<br>within ten feet (3 m) above or below the actual zero level of the<br>primary device. Then set the displayed level using Adjust<br>Options from the Configure menu. Refer to Section 3.8 <i>Setting</i><br><i>the Level</i> . |  |  |

Figure 3-16 Positioning the Bubble Line in the Flow Stream

#### 3.7.7 High-Velocity Flow Streams

The normal position of the bubble line in the flow stream is at a right angle to the flow. However, studies have indicated that at relatively high flow stream velocities (greater than five feet per second [1.5 meters per second]), this location may lead to a measured level lower than actual. This negative level offset is due to localized areas of low pressure near the bubble line outlet; the size of the offset depends upon the velocity of the flow stream and the configuration of the flow stream channel. You can, of course, adjust the level at the flow meter to compensate for the error. However, this is only effective if the flow rate and velocity are essentially constant. If the flow rate drops and the velocity decreases, the level adjustment you made earlier will be incorrect for the new, lower velocity and flow rate.

|        |                               | The best way to overcome this problem is to completely isolate<br>the bubble line from the flow stream velocity by placing it in a<br>stilling well, as described below. If this is not possible, you can<br>perhaps create a cavity in the bottom of the channel, and locate<br>the outlet of the bubble line in the depression, again isolating it<br>from the flow stream velocity.   |
|--------|-------------------------------|--|
|        |                               | In flow streams carrying large amounts of solids, however, this<br>may cause problems because of silt collecting in the depression<br>and restricting the bubble line. A third alternative is to put a 90<br>degree bend in the end of the bubble line, forming a horizontal<br>leg approximately two inches (5 cm) long, and orienting this hori-<br>zontal leg downstream, parallel with the flow. Tests have shown<br>that this orientation of the bubble line minimizes the effect of<br>flow stream velocity. |
| 3.7.8  | Stilling Wells                | If the installation includes a stilling well in the primary mea-<br>suring device, installing the bubble line in the stilling well is rec-<br>ommended. Attach the line securely to the stilling well, using<br>stainless steel and/or plastic mounting hardware.  |
|        |                               | Not all stilling wells are suitable for bubble line installation. If<br>the well is subject to silting or buildup of foreign material, the<br>bubble line may have to be mounted in the flow stream proper.  |
| 3.7.9  | Flume Bubble Line<br>Fittings | The large variety of primary measuring devices and installations<br>makes comprehensive bubble line installation instructions<br>impractical. However, valid general observations on bubble line<br>installation can be made. Flumes can be specified to include a<br>bubbler fitting. In new construction, this is highly recommended.<br>It may even be possible to modify an existing installation to<br>include a permanent bubbler fitting.   |
| 3.7.10 | Bubble Line<br>Extensions     | Teledyne Isco offers both stainless steel and copper bubble line<br>extensions. The metal extension may be easier to install in the<br>flow stream than the plastic bubble line because of its rigidity.<br>Two different extensions are available to match the two standard<br>bubble lines.  |
|        |                               | The extension for the PTFE bubble line includes a silicone rubber<br>tubing connector, and the tubing installation is as described<br>above. The vinyl bubble line attaches by simply slipping the vinyl<br>tube over the end of the extension.  |

Figure 3-17 Installing the Stainless Steel Bubble Line Extension

| 3.7.11 Open Channel<br>Installation | If you do not use a stilling well, attach the bubble line to the side<br>of the flow channel or flume. Make the attachment so it causes a<br>minimum amount of disturbance to the flow stream. If possible,<br>cut a groove in the side of the channel, place the bubble line in<br>the groove, and then grout over the groove.  |
|-------------------------------------|--|
|                                     | Alternatively, you can attach the bubble line to the side of the<br>channel, and then grout over the line to form smooth, sloped<br>lead-in and lead-out surfaces. However, if neither of these<br>methods is practical, you may simply attach the bubble line to<br>the side of the channel or the upstream side of a weir using<br>stainless steel and/or plastic mounting hardware. |
|                                     | In any case, always install the bubble line so it causes as little<br>disturbance to the flow stream as possible. This usually means<br>an installation on or adjacent to a channel wall where there is a<br>condition of stagnant flow. For temporary survey applications,<br>you can attach the bubble line with waterproof tape or other tem-<br>porary means.                      |
| 3.8 Setting the Level               | Although all other programming steps can be performed off-site,<br>the liquid level must be set at the measurement site following<br>installation.   |
|                                     | Once the 330 bubble line is installed in the flow stream, or the 310 sensor is installed over the flow stream, measure the present liquid level and enter this value for Level, under Configure > Adjust Options. Highlight "Adjust" and press Enter to confirm.   |
|                                     | From this screen, you can also update the display to show the current level of the stream.   |

Figure 3-18 Level adjustment

3.9 TIENet Sensor Installation in a Hazardous Location In applications where the TIENet sensor will operate within a hazardous area, the installation must be performed by trained and qualified personnel, according to the installation control drawing provided in Figure 3-19, and in accordance with local requirements.

Information about hazloc installation specific to the TIENet 310 Ultrasonic Level Sensor is provided in the sensor's user manual.

Figure 3-19 Hazardous Location Installation Control Drawing-ATEX

# Signature® Flow Meter

### Section 4 Portable Installation

This section contains physical preparation procedures and portable mounting methods for the Signature Flow Meter and associated Teledyne Isco equipment. Section 3 will contain the permanent installation information for the Signature Flow Meter.

**4.1 Introduction** The Signature Portable is equipped with one TIENet<sup>®</sup> receptacle. In the event a connection must be made directly to the board refer to the permanent Signature installation connection to external devices in Section 3.2.

Where additional TIENet devices are deployed with a Signature Portable, there is an optional TIENet 'Y' connection cable available to expand the number of connections as needed. See Appendix B for ordering information.

**4.2 Portable Stand** The portable stand allows the user to move the Signature to various locations and without a permanent installation. This Signature has multiple power options and can be in either in an upward facing or side facing position (Figure 4-1). The Signature Portable is shipped from the factory in a side facing position.

Figure 4-1 Signature on portable stand side facing (left) and upward facing (right)

Tools

4.2.1 Adjust Signature to Upward Position

#2 Phillips screw driver

To adjust the Signature to be in the upward facing position:

1. Move the handle into the down position by pulling out the handle latch pins on each side of the stand (Figure 4-2)

Figure 4-2 Pull out the handle latch pins on each side of the stand

 Loosen all of the screws in the top of the stand (2 panhead and 2 flathead per side) with a #2 Phillips screw driver. (Figure 4-3). These screws are captivated, so loosen until they stop turing.

Figure 4-3 One of the eight screws loosened.

3. Once the four flathead screws are loosened, rotate the meter toward the back and lift straight up to remove it from the stand (Figure 4-4).

Figure 4-4 Signature tilted up in preparation of removal

- 4. Align the notches in the Signature mount with the panhead screws on the stand.
- 5. Engage the slots and push the meter toward the back until it stops.
- 6. Tighten all 8 screws (4 on each side) (Figure 4-5).

Figure 4-5 Signature in upward facing position

| 4.3 Power                        | The Signature Portable is designed to be used with 12 VDC lead acid batteries.  |  |
|----------------------------------|---|--|
| 4.3.1 Power Connections          | The standard battery connection on a Signature Portable accepts<br>Teledyne Isco model 948 or 946 lead acid batteries.  |  |
|                                  | Adapting cables can be purchased to connect to a customer supplied deep cycle marine battery.   |  |
|                                  |   |  |
|                                  | Do not set the portable stand directly on the terminals of a battery. Serious injury or permanent damage may occur.   |  |
| 4.3.2 Outdoor<br>Recommendations | The Signature Portable can be mounted to the portable stand in a side facing or upward facing position (Figure 4-1).  |  |
|                                  | When the Signature Portable is used in an unprotected envi-<br>ronment it is recommended the screen is in the side facing<br>position so it does not collect water.   |  |
| 4.3.3 Battery Installation       | Common battery options for the Signature Portable:  |  |
|                                  | • 946 lead-acid battery   |  |
|                                  | • 948 lead-acid battery   |  |
|                                  | Lead-acid battery with solar panel  |  |
| 948 lead-acid battery            | When using the 948 lead-acid battery the portable stand will sit<br>directly on top of the battery case, where the battery is enclosed.<br>There is a notch in the back of the portable stand that will fit<br>over the power cable from the Signature to the battery. (Figure<br>4-6). |  |
|                                  |   |  |

 Notch for power cable
 Battery Case

Figure 4-6 Notch in stand for the power cable

When using the 946 lead-acid battery, this battery will fit directly under the Signature inside of the portable stand (Figure 4-7).

946 lead acid battery

To install the 946 lead-acid battery:

- 1. Remove the battery hold down of the portable stand by loosening the thumb screw.
- 2. Thread the power cable through to the left side of the portable stand and slide the battery in, between the metal tabs, after it. The battery will fit snugly.
- 3. Replace the battery hold down and tighten the thumb screw.
- 4. Plug the cable into the Signatures power connector.

Figure 4-8 Battery hold down and thumb screw

#### 4.4 Battery Life This section will cover the average battery life as related to the Expectancy most common applications. For more information about battery life please consult the factory. CAUTION The following section on battery life is for information purposes only and does not constitute a guarantee of service or warranty of any kind. 4.4.1 Major Standard **Equipment Settings Effecting Battery Life** Display backlight and When the front screen is powered off the Signature is no longer taking near continuous readings. The reading interval will be power based on the data storage rate and any actively used equations. Data storage rate Many options effect the storage rate as related to battery life, see. See 2.7.5 Data storage for a complete explanation. Equations Equations used by alarms, triggers, or secondary measurements can effect the battery life of the equipment. The minimum measurement setup in the equation should be the data storage interval used for battery calculations. For example, the data storage rate is set to 15 minutes, an equation is set with a measurement interval of 5 minutes. For battery life calculations it would be more accurate to use the battery life expectancy of 5 minutes.

# Figure 4-9 Example of defining conditions and building equations

| 4.4.2 Major Optional<br>Equipment Settings<br>Effecting battery Life |   |  |
|--|---|--|
| Cell Modem   | The longer the call window is open the more it will drain battery.  |  |
| LaserFlow  | The LaserFlow has additional battery life considerations. Please see the Laser 360 manual for more information  |  |
| Analog Output Card   | The analog output card is not a typical component on a battery<br>operated device. The current draw over time is great and hard to<br>predict.  |  |
| Ethernet Card  | With a very high average current, the ethernet card is not recom-<br>mended for most applications using batteries.  |  |
| Bubbler  | Bubbler purges draw a large amount of current. Lengthen the<br>Purge Interval for improved battery life.  |  |
| 4.4.3 Additional<br>Considerations for<br>Battery Life               |   |  |
| Bubbler Tubing   | The longer the bubbler and sensor line the more current draw<br>the meter will have. In most cases the difference in current draw<br>will not be a factor, but exceptionally long lengths will be a factor. |  |
| Reading Retries  | If the sensor is in a location where reading errors occur, the unit<br>will attempt to retry until a good reading is taken.   |  |
| Battery Capacity   | If the battery is damaged (decreased battery capacity) the Sig-<br>nature will not run as long as the charts and calculations in this<br>section suggest. Batteries loose capacity:                         |  |
|  | • as they age   |  |
|  | • as temperatures decreases   |  |
|  | • when stored   |  |
|  | discharged below default or recommended levels  |  |

| Table 4-1 Battery Life Expectancy(default measurement rate of 15 minutes) |           |           |           |           |  |
|---|-----------|-----------|-----------|-----------|--|
| Ultra Sonic LaserFlow A/V Bubbler   |           |           |           |           |  |

| 306 Sampler interface assuming               | No significant increase |  |  |
| 307 Analog input card (active)               | 45                      |  |  |
| 307 Analog input card (passive)              | No significant increase |  |  |
| 304 Contact Output                           | 10                      |  |  |
| Totalizer 1000 count per hour                | No significant increase |  |  |
| Ethernet communication module                | 88                      |  |  |

#### 4.4.4 Calculating Average Current Draw

If the conditions listed in the average battery life tables and default method do not match your application, you can use the following procedure to calculate the current draw.

A good quality, adjustable, regulated DC power supply can be substituted for the 12-volt battery. The power supply should have at least 3 Amperes output, preferably more, and capable of overcurrent surges.

Figure 4-10 Measuring flow meter current

#### **☑** Note

Do not attempt this procedure unless you have the proper equipment available and know how to make electrical measurements.

Many of the power using functions in the Signature vary over time. To measure current for a varying load requires a more-sophisticated type of multimeter, one that is capable of averaging high and low readings over a period of time. The Fluke® 87 Multimeter is one example of this type of meter.

You should set the meter on MIN/MAX and let it run with your program for several hours or more. Other manufacturers' meters are also acceptable, but only if they are capable of averaging current draw. The current test should be run long enough to capture all periodic usage. The longer you run the test, the more accurate the average will be.

#### 4.4.5 Battery Life Calculations

To calculate battery life expectancy for an installation, you must know two things:

- The capacity of the battery you are using
- The average current draw of the flow meter or (other device) powered

Battery capacity is expressed in ampere-hours. The battery manufacturer provides this information for each battery. This value is the product of a load current times an arbitrary time period, twenty hours for lead-acid types. Isco 946 batteries lead acid batteries are rated for 6.5 ampere-hours.

To determine battery life for a Signature running on a 946 lead acid battery, convert the battery capacity into milliamperes/hours and then divide the ma/hrs by the avg current draw. This will give you a number in hours. Divide that figure by 24, and you will have the number of days.

#### 🗹 Note

The published ampere-hour figures do not mean that you can expect to draw 6.5 amperes from the lead-acid battery for one hour.

To convert ampere-hours to milliamperes, multiply by 1,000.

Examples

 $6.5 \text{ ampere-hours} \times 1,000 = 6,500 \text{ mAh}$ 

If you divide this figure by the average current of the flow meter, say 65 mA, you will have:

 $6,500 \div 65 = 100$  hours

Divide this number by twenty-four to get days:

100 hours  $\div$  24 = 4.1 days

For considerations of safety, we suggest you subtract 10% from this number (100% - 5% for 95% capacity and 5% for a reserve at the end of discharge).

4.1 - .4 = 3.7 days

The 3.7 days is the battery expectancy for a lead-acid battery with a 65 mA continuous average drain, with a 10% derating factor. Remember if the battery fails there will be a period of time during which no measurements will be taken and no data stored (if you are also using Flowlink® software).

### 🗹 Note

Always operate these batteries with a reserve factor.

#### 4.4.6 Low Battery Cut Off and Battery Care

Batteries are considered fully discharged well before the terminal voltage drops to zero volts. Operating lead acid batteries below the fully discharged point decreases their capacity and damages the battery. Lead acid batteries, under a constant rate of discharge, are considered fully discharged at 11.5 volts, however; the Signature does not discharge the batteries at a constant rate.

Time durations will allow you to get the maximum amount of life and readings out of the battery without damaging it. It can also prevent a short term power dip from causing a premature shutdown. By default, the Signature will turn itself off when the battery voltage is at 11.5v for 2 min. To prevent the unit from cycling OFF and ON the unit will not recover (turn back ON) until the battery voltage is 13.0 for 2 minutes.

### 

Adjusting the low battery cutoff improperly will damage the batteries. Teledyne Isco assumes no liability for damage done to Teledyne Isco or third party vendors batteries. Adjust the low battery cut off at your own risk. User assumes all liability for damage done to batteries by altering the low battery cut off.

Using disposable batteries may allow for greater flexibility and possible usage. The low battery cutoff point can be adjusted by the user. The duration the battery must remain at this voltage for shutdown to occur is fixed at 5 min. If the low battery cut off is altered it must remain at the adjusted level for 5 min before the unit will shut down. Altering the low battery cutoff does not alter the recovery settings. No matter what the low battery cutoff is set to the unit will not recover or turn back on until the battery voltage is at 13.0 for 2min.

# 4.5 Connect to External Devices

Connection to TIENet socket.

Figure 4-11 Connector case, connectors, and fuses for Signature Portable Flow Meter

4.5.1 Connecting Devices to the TIENet Receptacle

The optional external TIENet devices compatible with the Signature Portable all scan in the hardware in the same manner. Multiple TIENet devices can be connected simultaneously to the same Signature Flow Meter. The following TIENet smart sensors/cables will attach to the TIENet receptacle:

- Ultrasonic Level Sensor
- Area Velocity Sensor
- Bubbler
- pH/Temperature
- LaserFlow
- Sampler

Connecting a TIENet receptacle to the Signature Portable

**O-Ring and Lubrication** 

for the TIENet receptacle

To connect the TIENet plug from the sensor to the TIENet Receptacle:

- 1. Align the connectors and push together (Figure 4-12).
- 2. After the physical connection is made, a scan must be performed (see section 2.6.1) for the device to be recognized.

For additional TIENet connections, use the TIENet Y-cable or alternately an expansion box.

1. Coat the O-ring's sealing surface with a silicone lubricant.

### 

Do not use petroleum-based lubricants. Petroleum-based lubricants will cause the O-ring to swell and eventually deteriorate. Aerosol silicone lubricant sprays often use petroleum-based propellents. If you are using an aerosol spray, allow a few minutes for the propellent to evaporate before proceeding.

- 2. Align and insert the connector. The sensor release will "click" when the sensor connector is fully seated.
- 3. Connect the two caps together.

Figure 4-12 How to connect a TIENet receptacle to the Signature Portable

Three-Hole Cord Grip

The following device wires/cables are normally connected thru the 3-hole cord grip:

- Rain Gauge
- SDI-12
- Modbus output

The wire/cable diameter can be .200 in to .230 in.

- Installing a Cable Through 1. Remove plug to open hole for an additional cable. a Three-Hole Cord Grip

Gland nut must be loose to remove this plug.

Figure 4-13 Removing the plug

### 🗹 Note

When replacing the plug, the rounded side needs to be pushed into the hole, with the flange facing out (see figure below).

2. Thread the cable through the open hole and various connectors.

3. Connect the three-hole cord grip to the Signature.

4. Attach the three-hole cord grip to the Signature port and attach the wires to the appropriate screw terminals.

#### 

Drilling holes in the Signature cases is not recommended and may result in water damage. The material of the Signature case is constructed of Noryl and does not lend itself to post molding alterations.

Connecting the Rain Gauge The following shows how to connect the rain gauge to the Signature Portable and how the cables should look when properly connected (Figure 4-14).

1. Remove the rain gauge cap and connect it to the TIENet receptacle.

Figure 4-14 Connecting a rain gauge to the Signature receptacle (L) and then to the Signature connector board (R)

# Signature® Flow Meter

### Section 5 Equipment Options

Optional equipment is designed to be user-installable. Internal options, when ordered at time of purchase, are installed in the Signature meter at the factory. This section describes each option and provides instructions for its installation and operation.

All optional cable entries must use appropriate ID conduit connections or cord-grip fittings to retain the IP66 rating. If you are using non-TIENet or non-Signature cables, you must supply the appropriate ID conduit connections or cord-grip fittings.

#### 🗹 Note

Installation and operation of exterior TIENet devices is covered in detail in the user manual for that technology.

Many options require interior access for installation. For connector case interior access and TIENet device wiring instructions, refer to *Connecting External Devices*, on page 3-1 and *Connecting TIENet Devices*, on page 3-7.

## 

Before opening the case, first ensure that mains power is disconnected from the unit and any battery power is disconnected.

Part numbers for ordering accessories are provided in Appendix B *Options and Accessories*. Optional equipment from Teledyne Isco includes:

AC Power Cord Kit /AC Wiring (Applies to Permanent Installation Only), on page 5-2

Battery Backup (Applies to Permanent Installation Only), on page 5-4

Mechanical Totalizer, on page 5-8 Sampler Interface, on page 5-14 External Desiccator, on page 5-11 TIENet Expansion Box, on page 5-15 Ultrasonic Level Sensor, on page 5-12 Isco Flowlink Software, on page 5-28 Bubbler Level Sensor, on page 5-13 and 6-19 Ethernet Modem, on page 5-28 Contact Output Card (TIENet 304), on page 5-16 Cellular Modems, on page 5-33 Analog Input Card (TIENet 307), on page 5-21 Laser Doppler Velocity Sensor, on page 5-13 Analog Output Card (TIENet 308), on page 5-25 Continuous Wave Doppler Velocity Sensor, on page 5-13 pH and Temperature Device, on page 5-15 Sampler Interface, on page 5-14 pH and Temperature Device, on page 5-15

#### 5.1 AC Power Cord Kit /AC Wiring (Applies to Permanent Installation Only)

The AC power cord kit includes a line cord with a strain relief cord-grip fitting. If ordered with the Signature Flow Meter, it will be shipped from the factory already installed.

Instructions for user installation are provided in this section. Note that these instructions can also be used as guidance for user-supplied or replacement line cord, hard wiring, or replacement power supply.

Open the flow meter housing, following all warnings and instructions provided in *Connecting External Devices*, on page 3-1.

1. *If a cord-grip fitting is already installed*, loosen the sealing nut on the AC line cord. *If conduit is installed*, remove the sealing material around the AC line cord where it enters the housing. This is to free the cabling for movement or removal.

Figure 5-1 AC Line cord with a cord-grip fitting

2. Remove the mounting screw and lift the power supply out of its molded niche, taking care not to strain the wires going to the board.

Figure 5-2 Power supply mounting screw

Figure 5-3 Power supply removal/replacement

- 3. Remove the clear plastic shield protecting the power supply terminals (Figure 5-4). Note that the Signature ground wire ends in a ring terminal so the line cord ground wire can easily be connected to the same terminal.
- 4. *If replacing the power supply*, label all wires according to their terminal connections (i.e., **L**, **N/L**, **Gnd**, **-V**, **+V**), and disconnect them.

Figure 5-4 Power supply terminal strip: AC Input and DC Output

- 5. If installing a cord-grip fitting (refer to Figure 5-1):
  - a. Remove the lock nut from the cable nut.
  - b. Install the cable nut through the line cord cable entry (closest to power supply location) in the bottom of the connector case and secure it to the Signature case wall with the lock nut.
  - c. Feed the line cord end through the sealing nut and then through the cable nut, into the case.
  - d. Lightly tighten the sealing nut, just enough to hold the line cord in place while connecting it to the power supply.
- 6. Connect the line cord wires to the power supply, as shown in Figure 5-4, and then reinstall the plastic protective shield.

### 🗹 Note

Double-check to ensure that the terminals labeled **Gnd**, **-V**, and **+V** on the Signature circuit board are wired to their corresponding terminals on the power supply.

- 7. Reinstall the plastic shield over the wiring connections.
- 8. When seating the power supply into its niche, guide the attached wires around in front of the mounting standoff and through the molded slot, so they are not strained or damaged (see Figure 5-3).
- 9. *If using a line cord*, gently tug the line cord to remove any slack within the enclosure, taking care not to stress the connection, and tighten the cord grip sealing nut.

### 

If you are using conduit instead of the cord-grip fitting, the conduit and wires in the conduit **must be sealed** to prevent harmful gases and moisture from entering the Signature enclosure. Failure to seal conduit could reduce equipment life.

10. Close the front panel and fasten it shut with the two Phillips screws.

**nent** The battery backup option consists of a Teledyne Isco Model 946 lead-acid battery pack and extension cable, with special hardware to mount it on the top of the Signature Flow Meter, or on a wall. The unterminated power cable normally enters the connector case through the second port from the right.

#### 🗹 Note

An optional external power loss alarm is available. See Section 5.3 *Power Loss Alarm*.

5.2 Battery Backup (Applies to Permanent Installation Only)

# 

Before opening the case, first ensure that mains power is disconnected from the unit.

### 

Before opening the case, disconnect the optional battery backup power, if used.

### 

Do not substitute another battery type for this option. Use only the Model 946 Lead-Acid battery.

Figure 5-5 Battery backup kit contents

### 

If you are using conduit instead of the cord-grip fitting, the conduit and wires must be sealed to prevent harmful gases and moisture from entering the Signature enclosure. Failure to seal conduit could reduce equipment life.

Installation

1. Remove line power from the Signature Flow Meter and open the case as previously described in Section 3.2.

### 

Do not connect the extension cable to the battery cable until all other steps are completed.

2. At the LEAD-ACID BATTERY terminal strip, connect the extension cable's black wire to the +12 terminal, and the white wire to the ground terminal.

Figure 5-6 Attach extension cable to the connector case

3. Install the mounting plate, either on top of the flow meter case using the Torx screws provided, or on the wall nearby.

Figure 5-7 Installing the battery backup mounting plate

- 4. Place the 946 battery on the mounting plate and secure it in place using the two black rubber draw catches.
- 5. Connect the battery cable to the extension cable.

Figure 5-8 Backup battery, installed

Note

Be sure to unplug the battery when intentionally disconnecting from AC power.

| 5.3 Power Loss Alarm                            | The Signature Flow Meter offers different options to notify you of line power loss.   |
|---|---|
| Contact Output Card<br>(TIENet 304)             | The Contact Output Card is an optional card that closes or opens<br>relays at specific thresholds set within the Signature Flow Meter<br>programming. For power loss indication, it is recommended to<br>configure the Signature to activate the contact output to CLOSE<br>when the 300 Sense Voltage drops below 12 VDC. The output<br>relay will deactivate when the 300 Sense Voltage drops below 12<br>VDC or if the power drops all together. |
| Analog Output Card<br>(TIENet 308)              | The Analog Output Card provides an analog output signal pro-<br>portional to a configured measurement input. For power loss<br>indication, it is recommended to configure the Signature so the<br>analog output is proportional to the 300 Sense Voltage. The<br>external device monitoring the analog output should alarm when<br>the analog signal drops below the equivalent of 12 VDC reported<br>by 300 Sense Voltage.                         |
| 12 Volt DC Output                               | The Signature system operates on 12 VDC. A voltage level of 12 VDC at the POWER 12.8V terminal (Figure 5-6) will indicate adequate power supplied to the Signature meter, whereas a voltage level of less than 12 VDC will indicate a power loss.   |
| Signature Power Loss<br>Alarm Box (60-5324-024) | This device energizes a relay based on the Signature operating voltage of 12 VDC. When the 12 VDC supply drops below 9 VDC the relay becomes de-energized and switches the relay contact indicating a power loss. It has NORMALLY OPEN and NORMALLY CLOSED outputs.   |

| 5.4 Mechanical Totalizer | The mechanical totalizer is a seven-digit, non-resettable<br>mechanical counter installed in the front panel. It increments<br>according to programmed totalizer resolution and units of<br>measure. The totalizer can be viewed once the metal shield or<br>bubbler module is removed. |
|--------------------------|---|
|                          | The volume represented by the mechanical totalizer is always<br>the primary Total Flow programmed in Measurement Setup ><br>Volume Input Setup (refer to <i>Configure Options</i> , on page 2-19).  |
|                          | The mechanical totalizer increments with the <b>third significant digit</b> of the selected resolution (see Figure 2-15 <i>Menu Tree: Volume Input Setup (total flow)</i> ), e.g.:  |
|                          | Resolution 999999999 = Increment every 100 units;   |
|                          | Resolution 99999999.9 = Increment every 10 units;   |
|                          | Resolution 9999999.99 = Increment every 1 unit, etc.  |
|                          | The Signature permits a maximum 300 counts per minute; if<br>totalized flow exceeds this rate, remaining volume will be<br>buffered until it can be counted, although buffering over<br>extended time periods is not recommended.   |
| Installation             | 1. Remove line power from the Signature Flow Meter and open the case as previously described in Section 3.2.  |
|                          | 2. Remove the four mounting screws holding the metal shield in place and set it aside.  |
|                          | 3. Using a razor blade or utility knife, carefully cut the six tabs in the control panel label to detach the totalizer window cover.  |
|                          | ✓ Note  |

Mote

Be sure to cut all six tabs. Pulling on the cover with some of the tabs still attached will damage the control panel label.

Figure 5-9 Remove totalizer window cover

Referring to Figure 5-10:

- 4. Remove the two screws above the totalizer cutout provided in the Main CBA. These screws will be used for mounting the totalizer.
- Install the totalizer in the cutout, attaching the two mounting tabs with the two screws, so that the numbers appear in the window.
   View the totalizer through the window and adjust the pagi

View the totalizer through the window and adjust the position, if necessary, before tightening the screws.

6. Plug the totalizer connector into **P10** on the Main CBA. This two pin connector is keyed to prevent incorrect attachment.

Figure 5-10 Optional non-resettable totalizer installation

### 5.5 External Desiccator

For Signature systems using the 330 or 360 Bubbler Module and/or the TIENet 350 Area Velocity Sensor, the desiccator vents the reference port for a pressure transducer, and the air intake port for the bubbler system air pump, keeping the interior of the flow meter case dry, as well as the sensor reference line.

## Mote

The desiccant is standard on the portable version of the 330, 350, and 360 Bubbler module. It is not standard on the non-portable 310 Bubbler module.

Figure 5-11 External desiccator, installed

Remove the two red protective end caps from the ports before installing a new cartridge.

Figure 5-12 Remove red caps before installing external desiccant cartridge

The desiccant cartridge is held in place by a spring tab on the side of the flow meter. Press against the front of the cartridge to disengage it from the unit.

Figure 5-13 Removing the external desiccant cartridge

The desiccant cartridge requires periodic maintenance. Refer to Section 6.5.2 *External Desiccator* for instructions.

**5.6 TIENet<sup>®</sup> Devices** Teledyne Isco's proprietary TIENet connectivity allows for the combination of multiple flow measurement technologies and other devices with the Signature flow meter.

The TIENet 310 Ultrasonic Level Sensor mounts directly over the flow stream. The sensor measures level by transmitting an ultrasonic pulse toward the liquid surface and then measuring the time it takes for the echo to return. The 310 is normally used with some type of primary device (typically a weir or flume) to measure flow in an open channel.

The 310 Sensor is ATEX-approved for use in potentially explosive atmospheres when specific conditions are met. Refer to the 310 user manual, as well as the control installation drawing in Section 3.9.

For complete installation and operation procedures, refer to the TIENet 310 sensor's user manual.

5-12

5.6.2 Bubbler Level Sensor

5.6.3 Laser Doppler Velocity Sensor

The factory-installed TIENet 330 Bubbler is normally used with some type of primary device (typically a weir or flume) to measure flow in an open channel.

The amount of pressure required to force bubbles from the end of a submerged bubble line is directly dependent on the hydrostatic pressure of the flow stream over the end of the bubble line. A pressure transducer inside the module senses this pressure and converts it into a level signal that the flow meter uses to calculate flow rate and total flow.

In order to operate with the 330 Bubbler, the Signature must have an external desiccator installed. For installation of the external desiccator, refer to Section 5.5.

Because the 330 Bubbler is a standard component in bubbler Signature meters, installation instructions are located in Section 6 *Maintenance and Servicing*, under 330 Bubbler Installation.

The TIENet 360 LaserFlow<sup>™</sup> velocity sensor remotely measures flow in open channels with non-contact Laser Doppler Velocity technology and non-contact Ultrasonic Level technology. The sensor uses advanced technology to measure velocity with a laser beam at single or multiple points below the surface of the wastewater stream.

To operate with the LaserFlow, the Signature requires firmware version **1.18** or later. Firmware update instructions are provided in Section 6.3 *Firmware Updates*.

For complete installation and operation procedures, refer to the LaserFlow sensor's user manual.

The TIENet 350 Area Velocity Sensor measures flow stream average area velocity and liquid level. The Signature uses this information to calculate the flow rate and total flow of the stream. To operate with the 350 sensor, the Signature requires firmware version **1.18** or later. Firmware update instructions are provided in Section 6.3 *Firmware Updates*.

The sensor is mounted in the flow stream, normally at the bottom of the channel. It measures average velocity using continuous ultrasonic sound waves to produce a Doppler effect. The sensor measures liquid level using an internal differential pressure transducer.

In order to operate with the 350 AV sensor, the Signature must have an external desiccator installed (see Section 5.5 *External Desiccator*). Signature bubbler systems will already have a desiccator installed. If you are adding a 350 AV sensor to a non-bubbler system, you will also need to add an external desiccator.

For complete sensor installation and operation procedures, refer to the TIENet 350 sensor's user manual.

5.6.4 Continuous Wave Doppler Velocity Sensor

Optimal drying power Some Signature flow meters have a single piece of tubing installed between the reference port and the humidity connector, and a cap plug on the intake port. While a Signature with this tubing configuration will operate satisfactorily with the 350 AV sensor in most situations, you can configure the tubing to utilize both chambers of the external desiccator to increase drying power and extend the desiccant service interval.

Items required:

- Plastic 'Y' Fitting (Part #209-0167-49)
- 0.25 x 0.125 silicone tubing (2 pcs, Part #029-1353-02)

Procedure:

- 1. Remove the cap plug.
- 2. Disconnect the tubing from the humidity connector and reroute it behind the ribbon cable.
- 3. Connect both the reference port tubing and the intake port tubing to the 'Y' connector.
- 4. Connect the 'Y' connector to the humidity connector (Figure 5-14).

#### Figure 5-14 Tubing configuration for optimal drying power (Exterior desiccator required)

#### 5.6.5 Sampler Interface

The TIENet 306 Sampler Interface connects the Signature Flow Meter to a Teledyne Isco wastewater sampler. Through this connection, the Signature can enable the sampler based on user-specified conditions, pace the sampling routine based on flow volume, and receive sample and bottle information from the sampler.

For complete installation and operation procedures, refer to the TIENet 306 device's user manual.

**5.6.6 pH and Temperature** Device The TIENet 301 pH sensor measures the acidity or alkalinity of an aqueous solution by determining the relative quantity of dissociated hydrogen ions in the solution. The normal scale for pH runs from 0 to 14, with 0 being most acidic and 14 being the most alkaline.

For complete installation and operation procedures, refer to the TIENet 301 device's user manual.

**5.6.7 TIENet Expansion Box** The water-tight expansion box connects to a TIENet terminal strip like other TIENet devices, and contains three additional strips inside, for connecting more devices. The expansion box can be daisy-chained with each box providing two additional cord grip ports. Additionally, the expansion box contains a TIENet connection for an option card (such as the 308 Analog Output option, Section 5.6.9). If an option card is used in an expansion box there is room for just one TIENet cable cord grip exiting the box.

## Note

For applications requiring reference air moisture protection, please contact the factory.

# 🗹 Note

The expansion box is not rated for use in hazardous locations.

Signature® Flow Meter Section 5 Equipment Options

Enclosure Rating: IP67 (NEMA4X, 6)

All optional cable entries must use appropriate ID conduit connections or cord-grip fittings to retain the IP67 rating. If you are using non-TIENet or non-Signature cables you must supply the appropriate ID conduit connections or cod-grip fittings.

(Cord-grip fittings are ordered separately)

Figure 5-15 TIENet Expansion Box

#### 5.6.8 Contact Output Card (TIENet 304)

The contact output card provides a contact closure that can be enabled based off of conditions set in the equation builder.

The Signature accepts up to three internal, user-installed TIENet option cards. The 304 contact output card provides two contact outputs per card for connection between the Signature meter and non-Isco process control equipment that requires a contact output.

## 

The 304 contact output card is not recommended for voltages above 60vDC or 48vAC.

|--|--|

Use proper static dissipation when handling circuit boards.

Programming menus and data display distinguish each output by serial number and channel number.

T-15 Torx driver

To install a card:

- 1. Remove power from the Signature flow meter and open the case, as previously described in *Connecting External Devices*, on page 3-1.
- 2. The option card includes a mounting screw. Remove the tubing retainer from the screw.
- 3. Remove the 3-pin header clip from its socket on the board.
- Connect the receiving wires to the terminals according to their labeling (positive and ground).
   Note that Contact 1 and Contact 2 are identified on the back of the board.

Figure 5-16304 contact output card front and back view

🗹 Note

• Normally Open (NO): When the condition is met, the circuit will be open.

• Common (C): There is always be a connection to the common.

• Normally Closed (NC): When the condition is met, the circuit will be open.

5. Gently press the card down so that the 4-pin connector **P4** plugs into one of the three analog output jacks on the board (Item 'J' in Figure 3-2).

 $Tools\ required$ 

6. Secure the card in place by tightening its mounting screw with the T-15 Torx driver. Do not overtighten.

Two cards are shown here. The Signature accepts up to three cards at once, for a possible six simultaneous input/output channels.

Figure 5-17 View of two cards installed

7. Feed the clip with receiving wires through the appropriate port on the bottom of the meter, and press the clip down into its socket on top of the card.

## Mote

Cabling is user-supplied. Shielded cable is recommended. For cord-grip fitting options, refer to Appendix B, Section B.3. If conduit is used, the conduit and wiring must be sealed to prevent entry of harmful gases and/or moisture.

Configuration

The 304 measurement configuration screen includes the 304 digital output option.

Home Display

Figure 5-18 304 contact output device configuration

Figure 5-19 304 contact output setup

5.6.9 Analog Input Card<br/>(TIENet 307)The 307 analog input<br/>analog signal as a num

The 307 analog input card allows the Signature to record an analog signal as a number of data types from several different units.

The Signature accepts up to three internal, user-installed TIENet 307 option cards. The 307 analog input card provides two 4-20mA inputs a piece for connection between the Signature meter and non-Isco process control equipment or other equipment that outputs a 4-20mA current signal.

# 

Use proper static dissipation when handling circuit boards.

Programming menus and data display distinguish each output by serial number and channel number.

T-15 Torx driver

To install a card:

- 1. Remove power from the Signature flow meter and open the case, as previously described in *Connecting External Devices*, on page 3-1. If the LED is green, a current is flowing.
- 2. The option card includes a mounting screw. Remove the tubing retainer from the screw.
- 3. Remove the 3-pin header clip from its socket on the board.
- 4. Connect the receiving wires to the terminals according to their labeling (positive and ground).

Channel 1

Note that Channel 1 and Channel 2 are identified on the back of the board.

Channel 2

Back of board

Figure 5-20307 analog input channel identification and terminal connections

 $Tools\ required$ 

- 5. Gently press the card down so that the 4-pin connector **P4** plugs into one of the three analog output jacks on the board (Item 'J' in Figure 3-2).
- 6. Secure the card in place by tightening its mounting screw with the T-15 Torx driver. Do not overtighten.
- 7. Feed the clip with receiving wires through the appropriate port on the bottom of the meter, and press the clip down into its socket on top of the card.

# Mote

Cabling is user-supplied. Shielded cable is recommended. For cord-grip fitting options, refer to Appendix B, Section B.3. If conduit is used, the conduit and wiring must be sealed to prevent entry of harmful gases and/or moisture.

The orientation of the wires is dependent on the setting of the channel. If the channel is set to active, the positive wire is connected to the out arrow. The connection will be reversed for the passive mode.

| Table 5-1 Direction of arrows and mode types |   |   |  |  |
|--|---|---|--|--|
| Switch                                       | Out<br>(arrow pointing<br>away from the<br>board) | In<br>(arrow is pointing<br>toward the board) |  |  |
| Switch is in the active mode (A)             | Positive  | Negative                                      |  |  |
| Switch is in the passive mode (P)            | Negative  | Positive                                      |  |  |

Active Mode

Passive Mode

NOTE: Active mode supplies power to the loop. Passive relies on another device powering the loop.

Figure 5-21 Direction of switch in active and passive modes

### Channels

Figure 5-22 307 analog input device configuration

parameters.

are % only.

Figure 5-23 307 analog input setup

#### 5.6.10 Analog Output Card (TIENet 308) The 308 analog output cards convert digital information from the flowmeter to a variable analog output current ranging from 4 to 20 milliamperes. When a parameter measured by the flow meter is converted into an analog output, 4 mA becomes the 0%, or baseline, for the parameter, while 20 mA becomes the 100%, or full-scale, of the parameter. For basic programming steps, refer to Figures 5-18 and 5-19.

The Signature accepts up to three internal, user-installed TIENet option cards. The 308 analog output card provides two scalable 4-20mA outputs per card for connection between the Si nature meter and non-Isco process control equipment or other equipment that accepts a 4-20mA current signal.

## 

Use proper static dissipation when handling circuit boards.

Programming menus and data display distinguish each output by serial number and channel number.

T-15 Torx driver

Tools required

To install a card:

- 1. Remove power from the Signature flow meter and open the case, as previously described in *Connecting External Devices*, on page 3-1.
- 2. The option card includes a mounting screw. Remove the tubing retainer from the screw.
- 3. Remove the 3-pin header clip from its socket on the board.
- Connect the receiving wires to the terminals according to their labeling (positive and ground).
   Note that Channel 1 and Channel 2 are identified on the back of the board.

Figure 5-24308 analog output channel identification and terminal connections

- 6. Secure the card in place by tightening its mounting screw with the T-15 Torx driver. Do not overtighten.
- 7. Feed the clip with receiving wires through the appropriate port on the bottom of the meter, and press the clip down into its socket on top of the card.

## Mote

Cabling is user-supplied. Shielded cable is recommended. For cord-grip fitting options, refer to Appendix B, Section B.3. If conduit is used, the conduit and wiring must be sealed to prevent entry of harmful gases and/or moisture.

Configuration

The 308 measurement configuration screen includes a minimum and maximum reading as well as a scaling option.

Figure 5-26 308 analog output setup

## 5.7 Isco Flowlink Software

Flowlink® is Teledyne Isco's proprietary software system for data acquisition, storage, retrieval, and analysis. Using the interface of Microsoft Windows, Flowlink can be used to remotely program the Signature Flow Meter, retrieve data from the flow monitoring system, present site data graphically, and generate statistical information from the site data.

Flowlink helps ensure data integrity by displaying the Signature's tracked configuration changes, data measurement summaries, diagnostic test results, and user events in the program. With these tools, Flowlink provides assurance that the data has not been altered.

USB drivers for computer direct connection to the Signature Flow Meter are included on the Flowlink CD, and must be loaded prior to direct connection between the computer and the Signature.

See Section Connecting to the Signature with Flowlink, on page 2-2 for instructions on how to connect to the Signature meter with Flowlink software.

From Flowlink, the event data can be exported and saved in the form of text reports on your computer, searchable by site name, module, and date. For complete information, refer to Section Signature Data in Flowlink, on page 2-34.

Setup and data retrieval, as well as alarm output configuration, can be accomplished remotely via TCP/IP communication protocol with a static address, using Flowlink software and the ethernet modem to access the Signature's web browser. The ethernet modem is factory-installed on the connector case.

> The ethernet modem can also be installed by the user. Remove line and/or optional battery power from the Signature Flow Meter and open the case as previously described in Section 3.2.

# CAUTION

Always use proper static dissipation methods when handling circuit boards.

# 

Before opening the case, first ensure that mains power is disconnected from the unit.

# 

Before opening the case, disconnect the optional battery backup power, if used.

## **5.8 Ethernet Modem**

Figure 5-27 Ethernet modem kit contents

1. Press the modem assembly down into its socket on the connector case (item G in Figure 3-2 *Connector case, connectors, and fuses*), with the row of dots along the bottom left and right edges aligned with the row of circles on the board to ensure proper orientation.

- 2. Place the plastic spacer over the screw hole by the bottom right corner of the modem.
- 3. Place the lock washer on top of the spacer.

4. Place the rectangular retainer over the lockwasher, with the countersink facing up, and attach with the screw.

Figure 5-28 Ethernet modem installation

In order to communicate with the Signature Flow Meter using the ethernet modem, your network must have TCP/IP services installed. A static IP address must be reserved for the Signature, and client network computers must be allowed to access the static IP address.

#### 5.8.1 Ethernet Modem Configuration

When installation is complete and power restored, wait one minute for the Signature to recognize the modem before programming.

## 🗹 Note

The Signature does not support Dynamic Host Configuration Protocol (DHCP). The network communication information (IP, gateway, and subnet mask) must come from your network administrator and be entered manually into the flow meter.

When you select Modem Setup from the Hardware Setup menu, the type of modem installed determines what screen is displayed.

To configure the Signature for ethernet communication, you must have the following information on hand prior to Hardware Setup:

**IP Address –** An Internet Protocol (IP) address is the unique numerical label assigned to each device (e.g., computer, printer, flow meter, etc.) on a computer network for interface identification and location addressing. The Signature's Ethernet modem requires a *Static* IP address for remote communication.

**TCP Port –** The default port setting is 1700. This is the communication port associated with the static IP address on your network.

**Gateway Address –** The gateway is the point of communication that joins two different networks with different base IPs.

**Subnet Mask –** This is the umbrella location that allows multiple nodes to communicate within the network.

It designates a subnetwork within the larger network. Traffic between subnetworks is exchanged or routed through the Gateway.

Special network access may be required to configure these settings. For further assistance, contact your network administrator.

| <u></u>            |                      |  |
|--------------------|----------------------|--|
| Modem Model:       | MULTITECH MT 100 SEM |  |
| Static IP Address: | 000.000.000.00       |  |
| TCP Port:          | 1700                 |  |
| Gateway Address:   | 000.000.000.000      |  |
| Subnet Mask:       | 255.255.255.0        |  |
|                    |                      |  |

#### 5.8.2 Network Firewall Settings

In order for your network administrator to identify the Signature in the network firewall setup, it must have a node ID (also known as the MAC address). This is the NODE ID printed on the ethernet modem's serial tag (refer to Figure 5-30).

Figure 5-30 Locating the NODE ID (MAC address) on the ethernet modem

## 5.9 Cellular Modems

Setup and data retrieval through the Signature's web browser, as well as alarm outputs, can be accomplished remotely with one of the available cellular modems. The whip-style antenna has a magnetic mounting base.

Figure 5-31 Magnetic-mount cellular antenna

5.9.1 CDMA Modem

The Code Division Multiple Access (CDMA) modem can automatically push data to a secure server running Isco Flowlink Pro software, with 1xRTT data transmission.

Figure 5-32 CDMA Cellular modem

#### 5.9.2 GSM Modem

The Global System Mobile (GSM) modem can automatically push data to a secure server running Isco Flowlink Pro software, with GPRS data transmission.

Your service parameters, or provider, can be changed by replacing the removable Subscriber Information Module (SIM) card in your modem.

# Note

The modems shown do not necessary represent the modems installed.

## 🗹 Note

A Standard (Mini) SIM card is required for any GSM units including the Signature.

Micro SIM Card 15 x 12 mm

 $Figure \ 5\text{-}33 \ GSM \ Cellular \ modem$ 

5.9.3 Installing the Cellular Modem The modem kit includes the modem, power cable, DB9 serial cable, and coaxial antenna plug cable.

# Mote

Before installing the modem, remove the top label (with the FCC ID on it) taped to the modem and adhere it to the outside of the Signature case on the bottom of the unit, on the left side,

in the largest of the three sections (Figure 5-34). This is required by the FCC.

Figure 5-34 FCC ID label on modem and location of label on the bottom of Signature case

1. Remove line power from the Signature Flow Meter and open the case as previously described in Section 3.2.

Figure 5-35 Cellular modem kit contents

- 2. Install the plug in the preferred port (far left most commonly used). Route the antenna plug cable under any other cabling, and install the plug in any open port.
- 3. Connect the three cables to the modem.
- 4. Remove the screw retainers and fasten the modem's mounting bracket against the connector case, as shown below, using the two mounting screws.
- 5. Plug the serial and power cables into their respective connectors on the board.

Figure 5-36 Cellular modem installation

For the GSM modem, if an Access Point Name (APN) is used, select SINGLE for the operating mode and enter the name.

For portable applications the modem can be set up with the call in the time window. To conserve power, the time window does not effect the push/outgoing connections. The time window restricts when the meter can be acceded via a modem connection.

Figure 5-37 Cellular modem setup: Communication settings

# Signature® Flow Meter

# Section 6 Maintenance and Servicing

### 6.1 Maintenance

The following tables are recommended maintenance checks to ensure proper operation. As site conditions may vary, increase the frequency of inspections as needed.

| Table 6-1 Recommended Maintenance (Accessible Locations) |  |                          |
|--|--|--------------------------|
| Action   | Recommended<br>Frequency               | Location                 |
| Check desiccant for appropriate color <sup>a</sup>       | Monthly or following<br>humidity error | On-site                  |
| Check bubble line for plugs or obstructions              | Monthly                                | On-site                  |
| Check bubble line for kinks                              | Monthly                                | On-site                  |
| Check pump run time during manual purge <sup>b</sup>     | Monthly                                | On-site                  |
| Check for level measurement errors                       | Weekly                                 | Via Flowlink application |

a. When dry, the desiccant appears orange in color.

b. If the run time is >15 seconds, replace the intake gore filter.

| Table 6-2 Recommended Maintenance (Difficult-to-Access Locations) |  |                          |
|---|--|--------------------------|
| Action  | Recommended<br>Frequency                         | Location                 |
| Check desiccant for appropriate color <sup>a</sup>                | Every 6 months or<br>following humidity<br>error | On-site                  |
| Check bubble line for plugs or obstructions                       | Every 6 months                                   | On-site                  |
| Check bubble line for kinks                                       | Every 6 months                                   | On-site                  |
| Check pump run time during manual purge <sup>b</sup>              | Every 6 months                                   | On-site                  |
| Check for level measurement errors                                | Weekly   | Via Flowlink application |

a. When dry, the desiccant appears orange in color.I

b. If the run time is >15 seconds, replace the intake gore filter.

#### 6.2 Cleaning

#### 6.3 Firmware Updates

The Signature flow meter may be cleaned with water and a mild detergent. For hard to remove stains, isopropyl alcohol may be used. If the instrument is in an isolated area and the case is sealed closed, it may be cleaned using a water hose.

Signature and TIENet device firmware updates are provided in the form of .bin files, which will be available for download from the Teledyne Isco website. Note that firmware updates do not remove any program settings or delete data.

To install an update:

- 1. Create a folder in the top directory of a flash drive, and name it BINFILE.
- 2. Download the .bin file to be installed. To find your correct .bin file, go to www.isco.com and click on *Software/Firmware Updates* in the lower left corner. Select *Open Channel Flow Measurement*.

Figure 6-1 Locating firmware updates

3. Save the new .bin file(s) to the BINFILE folder you created on the flash drive.

4. Using the flash drive adaptor cable provided with the Signature, connect the flash drive to the micro-USB assembly on the flow meter's front panel.

Figure 6-2 USB Micro adaptor cable (flash drive not included)

- 5. The USB Options menu appears on the display. Select option #3, Update Firmware.
- 6. You will be prompted to select either Signature or TIENet firmware. Select the appropriate .bin file from the pull down menu and press NEXT.
  - a. Update Signature Firmware

The update will load for approximately three minutes. During this time, do not make any changes to the Signature. When the firmware load is complete, the Signature will prompt you to remove the USB drive. An automatic reboot then occurs over a period of approximately five minutes, during which the green LED signals that an internal operation is in progress. Do not unplug the flow meter or press any keys until the Home screen appears. In the event that the upload fails, contact Teledyne Isco.

b. Update TIENet (Smart Sensor) Firmware

Select the radio button next to each device to be updated and press NEXT. The progress of the sensor firmware update(s) will be displayed. A confirmation screen will appear when the update is complete.

c. Bootcode

This option is only used when the update(s) failed and the sensor is no longer responding. Select the "Bootcode" option, then select the appropriate file from the drop-down menu to be updated. All other updates are inactive when this option is selected.

### 6.4 Accessing the Interior

Some maintenance or servicing tasks require opening the Signature housing to access the interior. Always refer to this section prior to doing so.

# 

Before opening the case, first ensure that mains power is disconnected from the unit.

# 

Before opening the case, disconnect the optional battery backup power, if used (refer to Figure 5-8 *Backup battery, installed*).

Before restoring mains power, ensure that the flow meter's USB connector does not have a cable attached.

Open the door to access the two large screws holding the front panel on the connector case. Remove the two screws, then reinsert them in the front panel and latch the lid so they will not be misplaced.

Figure 6-3 Open door and front panel to access interior

| 6.5 Desiccant             | The inside of the flow meter housing must be kept dry at all<br>times to prevent moisture damage to the internal components.<br>All Signature flow meters have an internal desiccant bag to<br>absorb moisture. Signature flow meters using a 330 bubbler also<br>require an external desiccator. |
|---------------------------|---|
|                           | If increased humidity is indicated by either the humidity reading<br>of the flow meter or the color of the external desiccant, the des-<br>iccant must be renewed or replaced before damage occurs.   |
|                           | If this occurs more frequently than expected, inspect the seals of cord-grip fittings and conduit, if used.   |
| Humidity alarm            | The humidity of the case interior, reference (ambient) air, and<br>bubble intake air (if a 330 bubbler is installed) are all param-<br>eters that can be selected as conditions to trigger an alarm, noti-<br>fying you when it is time to renew or replace your desiccant.                       |
|                           | The suggested alarm setting is a threshold condition of 40%. For detailed instructions about setting up conditions and alarms, refer to Sections <i>Equation / Trigger Setup</i> , on page 2-24, and <i>Inputs / Outputs / Alarms Setup</i> , on page 2-27.                                       |
| 6.5.1 Internal Desiccator | Saturated internal desiccant bags must be replaced; unlike the external desiccant, they are not renewable.  |
|                           | The desiccant bag is held in place by a metal bracket. Remove<br>the two screws holding the bracket.  |
|                           |   |

P.-CHE D.-CHE B. D. CHE B. D

#### 6.5.2 External Desiccator

The desiccator vents the reference port for a pressure transducer, and the air intake port for the bubbler system air pump, keeping the interior of the flow meter case dry.

Figure 6-5 External desiccator, installed

When dry, the loose silica gel desiccant inside the chambers is orange or yellow. When the desiccant becomes saturated with moisture, it turns green or blue, indicating that the intake air and reference line are no longer protected from humidity.

Figure 6-6 Desiccant indicating saturation

The desiccant cartridge is held in place by a spring tab on the side of the flow meter. Press against the front of the cartridge to disengage it from the unit.

Figure 6-7 Removing the external desiccant cartridge

ംം

Unscrew the two black caps and carefully pour the desiccant out.

If removal is difficult, screw the caps back in and unscrew again.

Gently knock the caps and the cartridge against a hard surface to free any small particles in the threads, as these can hinder proper sealing and cause wear.

Using a funnel, fill both chambers with dry desiccant, replace the caps, ensuring that they are fully engaged. Press the cartridge back into place on the side of the flow meter.

### Note

If this is a new desiccant cartridge, remove the two red protective end caps from the ports before installing a new cartridge.

*Figure 6-8 Opening the desiccant cartridge chambers* 

Renewing loose desiccant

To renew the desiccant, spread it in a single layer on a flat metal tray. Place in a vented, circulating forced air, conventional oven in a well ventilated room, and heat at 100 -  $175^{\circ}C$  (212 -  $350^{\circ}F$ ) for about three hours, or until the color has returned to orange or yellow.

MSDS (Material Safety Data Sheets) for silica gel chemicals are provided in Appendix C.

## 6.6 Troubleshooting

The tables in the following section provide troubleshooting information to help in determining the causes of problems that may occur with the Signature flow meter or TIENet devices.

The troubleshooting tables cover the flow meter and each TIENet device separately. Note that the 300 TIENet device (Table 6-4) is the internal connector case.

# 🗹 Note

Any time a circuit board is replaced or a sensor disconnected, you MUST perform a hardware scan and SDI-12 scan (if connected) before resuming operation.

### 6.6.1 Signature Flow Meter

| Table 6-3 Troubleshooting: Signature Flow Meter |  |  |                        |
|---|--|--|------------------------|
| Symptom   | Cause Action Parts                       |  | Parts                  |
| Display repeatedly goes<br>blank                | Power setting is set to turn display off | If key is not pressed within 5 minutes, press<br>any key to turn the display on.                       |                        |
| Blank Display but audi-                         | Contrast is out of<br>adjustment         | Adjust the display contrast by repeatedly pressing the up or dow arrow while holding down the +/- key. |                        |
| ble beep when a key is pressed                  | Faulty Display                           | Replace with known good display.   | Display<br>130-0602-06 |

| Table 6-3 Troubleshooting: Signature Flow Meter (Continued) |   |   |   |
|---|---|---|---|
| Symptom   | Cause   | Action  | Parts   |
|   | Open Fuse F3  | Replace 4A/250V/5X20mm Slo Blo fuse<br>(Figure 3-2 <i>Connector case, connectors, and fuses</i> , Item L). If the fuse opens again, check<br>for devices that may be shorting the supply,<br>such as an external connection, modem or<br>option card.   | 4A Fuse<br>411-9901-84                        |
|   | Dead Lead-Acid<br>Battery   | Replace or recharge the main battery con-<br>nected to the internal "Lead-Acid" terminals.  | 60-3004-106<br>Model 946<br>Lead-Acid Battery |
| Blank display and no<br>beep when a key is<br>pressed       | DC power supply not<br>supplying 12.8 VDC<br>output.                            | Check for proper AC voltage. If proper AC voltage is present, replace DC power supply.  | DC Power Supply<br>60-4304-037                |
|   |   | Service check: Disconnect the internal power<br>supply wires (Red +/pos, Black –/neg) from<br>the power terminals (Figure 3-2 <i>Connector</i><br><i>case, connectors, and fuses</i> , Item F). Con-<br>nect an Isco adaptor cable to the power termi-<br>nals (Black +/pos, White –/neg). Then<br>connect an Isco power supply (Model 913,<br>914, 923, or 924) to the adaptor cable.<br>If the Signature then functions properly,<br>replace the internal power supply. | Isco Adaptor Cable<br>69-4304-034             |
|   | Broken or loose wire<br>from power supply<br>module to the connec-<br>tor case. | Repair connections (Red +/pos, Black –/neg).  |   |

| Refer to Section 2.6.1& 2.6.2.  | Defective TIENet or SDI12 device.                      | Substitute a known working device and rescan. If it now works, replace the faulty device.  |  |  |
|   | Case circuit board faulty.                             | Substitute with known working board.   | 300 Connector<br>Case CBA<br>60-4304-041 |  |
|   | Main CBA faulty.                                       |  | Main CBA<br>60-4304-042                  |  |
|   | Ribbon cable damaged or loose.                         | Check or cycle connections, then substi-<br>tute with known working cable.   | Ribbon Cable<br>69-4304-032              |  |

## 6.6.3 TIENet 301 pH/Temp

| Table 6-5 Troubleshooting: TIENet 301 pH/Temperature Device |                                |   |                           |
|---|--------------------------------|---|---------------------------|
| Symptom   | Cause                          | Action  | Part                      |
|   | No sensor connected to the 301 | Connect pH probe  |                           |
|   |                                | Rescan device in Hardware Setup   |                           |
| pH Will not calibrate                                       | 301 module not recognized      | Check TIENet wire connections. Follow wiring code silk-screened on circuit board. |                           |
|   | TIENet connection fuse open    | Replace if open   | 3.15A Fuse<br>411-0212-70 |
|   | Probe defective                | Replace probe   | pH Probe<br>60-9004-126   |

| Table 6-5 Troubleshooting: TIENet 301 pH/Temperature Device (Continued) |  |  |                         |  |
|---|--|--|-------------------------|--|
| Symptom   | Cause                                      | Action   | Part                    |  |
|   | Buffers contaminated or wrong buffer used. | Use new/correct pH buffer solution.  |                         |  |
|   | Temperature is not being read.             | Replace probe  |                         |  |
| Incorrect pH read-<br>ings / slow response                              | Probe bulb is contaminated                 | Clean probe and recalibrate. If readings are still incorrect, replace probe.             | pH Probe<br>60-9004-126 |  |
|   | Calibrated before reading stabi-<br>lized. | Recalibrate and allow the readings to stabilize before con-<br>tinuing with calibration. |                         |  |

## 6.6.4 TEINet 304 Contact Output Card

|  | Table 6-6 Troubleshooting: TIENet 304 Contact Output Card  |  |  |  |
|--|--|--|--|--|
| Symptom  | Cause  | Action   |  |  |
| The 304 card is<br>not a selectable<br>option in the<br>software after     | A TIENET scan must be pre-<br>formed after the card is physi-<br>cally installed.                      | Preform a TIENet scan.   |  |  |
| the card is installed.   | In the HARDWARE SETUP   SMART<br>SENSOR SETUP   CONFIGURE<br>MEASUREMENTS, no options are<br>selected. | In the HARDWARE SETUP   SMART SENSOR SETUP   CONFIGURE<br>MEASUREMENTS, select one or more of the options. |  |  |
| Contact closure<br>is not being<br>made (verified<br>with an ohm<br>meter) | The Contact Output card is not<br>configured correctly in the soft-<br>ware.                           | See section 2.7.7 to configure the 304 card properly.  |  |  |

## 6.6.5 TIENet 307 Analog Input Card

| Table 6-7 Troubleshooting: TIENet 307 Analog Input Card                |  |  |  |
|--|--|--|--|
| Symptom  | Cause  | Action   |  |
| The 307 card is<br>not a selectable<br>option in the<br>software after | A TIENet scan must be pre-<br>formed after the card is physi-<br>cally installed.                      | Preform a TIENet scan.   |  |
| the card is installed.   | In the HARDWARE SETUP   SMART<br>SENSOR SETUP   CONFIGURE<br>MEASUREMENTS, no options are<br>selected. | In the HARDWARE SETUP   SMART SENSOR SETUP   CONFIGURE<br>MEASUREMENTS, select one or more of the options.   |  |
|  | The analog input card is not<br>configured correctly in the soft-<br>ware.                             | See section 2.7.7 to configure the 307 card properly. Use the green and yellow LED lamps to verify the hardware using the set-up menus.  |  |
|  | The passive/active setting is incorrect or indeterminate.  | Verify the setting your device requires and change the active or passive settings on the 307 card. Verify the setting from the set-up menus.   |  |
| The 307 card is not reading 4-20                                       | Improper connection.   | Verify the wires are attached to the correct channels and in the correct polarity. Use the labels and LED lamps to verity the hard-ware using the setup menus. The green LED lamp will light when proper current is flowing in the analog circuit. |  |
|  | External device is faulty or incor-<br>rectly configured.  | To verify, check the output with an ampmeter.  |  |
|  | Over-current protection device in the 307 has been tripped.  | Disconnect power from the 307 card, the Signature, and the external analog loop. Wait 30 seconds.  |  |

### 6.6.6 TIENet 306 Sampler Interface

|                           | Table 6-8 Troubleshooting: TIENet 306 Sampler Interface |   |  |  |
|---------------------------|---|---|--|--|
| Symptom                   | Cause   | Action  |  |  |
| Incorrect pacing interval | Incorrect flow total selected for pacing                | Assign the correct sensor to the correct flow rate to the correct<br>total flow.<br>Example: Needed to pace from the 330 bubbler, but programmed<br>to pace from the 310 USLS.                            |  |  |
| No sampler pac-<br>ing    | Sampler's flow pulse input not working                  | Connect a different sampler, or test the existing sampler by short-<br>ing pins A and C on the sampler's Flow Meter port, while the pro-<br>gram is running. The displayed pulse count should count down. |  |  |

## 6.6.7 TIENet 308 Analog Output

| Table 6-9 Troubleshooting: TIENet 308 4-20mA Analog Output |  |  |  |
|--|--|--|--|
| Symptom Cause  |  | Action   |  |
|  | Incorrect wiring   | Rewire per connector diagram   |  |
| 4-20 output is missing, or zero current output             | Excessive load   | Disconnect external equipment and test the output with VOM. If OK then reduce load resistance (maximum 900 $\Omega$ ) or add <u>isolated</u> power to the current loop.  |  |
|  | Analog circuit board failure   | Use the other output channel on the 308 circuit board. If current is still 0 mA, replace circuit board. If the VOM reads 4mA or greater, reprogram to use that output or replace the circuit board. Part #60-4304-006            |  |
|  | Wires on incorrect output<br>(wired to output 2 instead of out-<br>put 1)  | Move connector to proper output and verify using the yellow LED lamp indications from the setup menu.  |  |
| 4-20 only reads 4mA  | Analog percent is not selected in<br>the TIENet HARDWARE SETUP  <br>SMART SENSOR SETUP   CONFIG-<br>URE MEASUREMENTS | In the HARDWARE SETUP   SMART SENSOR SETUP   CON-<br>FIGURE MEASUREMENTS, select one or more of the<br>options. See sections 2.6.1 <i>Smart Sensor Setup</i><br>( <i>TIENet</i> ) and 2.7.7 <i>Inputs/Outputs/Alarms Setup</i> . |  |
|  | Improper parameter set for the output.   | Verify/change the settings/range to the proper parame-<br>ter.   |  |

| Table 6-9 Trou   | Table 6-9 Troubleshooting: TIENet 308 4-20mA Analog Output (Continued)           |  |  |  |
|--|--|--|--|--|
| Symptom  | Cause  | Action   |  |  |
|  | Excessive load   | Disconnect external equipment and test the output with VOM. If OK then reduce load resistance (maximum 900 $\Omega$ ) or add <u>isolated</u> power to the current loop.            |  |  |
| 4-20 reading incorrectly   | Improper module/parameter set for the output                                     | Verify/change the settings/range to the correct mod-<br>ule/parameter.   |  |  |
|  | Connected to incorrect output;<br>e.g., wired to output 2 instead of<br>output 1 | Move connector to proper output and verify using the yellow LED lamp indications from the setup menu.  |  |  |
| The 308 option card is not<br>a selectable option in the<br>software after the card is<br>installed. | TIENet 308 is not properly con-<br>figured                                       | Verify the TIENet configuration contains analog percent readings   |  |  |
| Measurement error for analog current   | No load applied to the output cir-<br>cuit, or open circuit wiring.              | The output must have a load resistance (maximum 900 $\Omega$ ). For verification, this can be accomplished by connecting the current meter leads to the terminals of the 308 card. |  |  |
| External device not reading 4-20   | Over-current protection device in the 307 has been tripped.                      | Disconnect power from the 307 card, the Signature, and the external analog loop. Wait 30 seconds.  |  |  |

#### 6.6.8 TIENet 310 USLS

| Table 6-10 Troubleshooting: TIENet 310 Ultrasonic Level Sensor |  |  |  |
|--|--|--|--|
| Symptom Cause  |  | Action   |  |
|  | Not scanned  | Perform a smart sensor scan  |  |
|  | Not able to achieve signal lock (misalignment,<br>loose mounting, turbulence, foam, or debris in<br>the water) | Adjust mounting or place over a solid surface.   |  |
| Invalid level, display has<br>asterisk (*) by level reading    | Level outside of the Blanking distances  | Adjust min/max blanking distances  |  |
|  | Not wired correctly  | Check/repair wiring  |  |
|  | Open fuse  | Replace fuse FU-T 3.15A and rescan.<br>Part #411-0212-70. Refer to Figure 3-2<br>Item K. |  |
|  | Failed sensor  | Replace with known good sensor   |  |
| No level reading on the dis-<br>play                           | Parameter not selected to be displayed on<br>Home Display  | Add the parameter to the Home Dis-<br>play. Refer to Section 2.7.1 <i>Site Setup</i> .   |  |

| Table 6-10 Troubleshooting: TIENet 310 Ultrasonic Level Sensor (Continued) |                                   |  |
|--|-----------------------------------|--|
| Symptom  | Cause                             | Action   |
| Incorrect level reading  | Level not adjusted properly       | Readjust level   |
|  | Sensor misaligned                 | Realign sensor   |
|  | Objects in the path of the signal | Adjust min/max blanking distances and/or reposition sensor.            |
|  | Sensor exposed to direct sunlight | Install sunshade. Refer to Appendix B <i>Options and Accessories</i> . |

### 6.6.9 TIENet 330 Bubbler

| Air Supply of Bubbler | The bubbler's air supply is brought into the air pump thru a des-<br>iccator, filter, humidity sensor, and into the intake of the air<br>pump.  |
|-----------------------|---|
| Output of Air Pump    | Past the output of the air pump is a check valve that allows pres-<br>surized air from the air pump to enter the air tank. The air pump<br>is programmed to maintain a pressure in the air tank measured<br>by a pressure transducer (P4 referenced thru P3 vented to ref-<br>erence air).  |
| Normal Operation      | During normal operation, the air purge solenoid is shut as air<br>passes thru the filter, bubble orifice, and to the bubble out. Air<br>passes thru the autozero valve to the pressure transducer P1(ref-<br>erenced to P2 which is vented to reference air). The pressure<br>measurement taken at P1 is used to calculate the level reading. |
| Purge Cycle           | During the purge cycle, the purge valve is opened allowing all the pressure in the tank to vent though the bubble out.  |
| Autozero              | The Signature automatically performs an autozero. During an autozero, the autozero valve is activated tying P1 and P2 together so an autozero of the pressure transducer can be performed.  |

Figure 6-9 Plumbing diagram of bubbler

- P1 is the pressure measurement for the bubble line.
- P2 is the atmopheric reference for the bubble line.
- P4 is the pressure measurement for tank pressure.
- P4 is the atmopheric reference for the bubble line.
- Autozero Valve normally has the bottom port going to P2 open and top port going to the 4-way manifold (closed) during the autozero cycle.

| Table 6-11 Troubleshooting: TIENet 330 Bubbler Module |  |  |                               |                           |

### 6.7 330 Bubbler Installation

The TIENet 330 bubbler device is factory-installed for Signature bubbler flow meters. It can also be installed by the user to convert a Signature flow meter into a bubbler, or to replace an old 330 device.

Preparation steps are provided in Section 6.7.1 (converting a non-bubbler unit) and Section 6.7.2 (replacing an existing bubbler device). Instructions for installing the new bubbler are in Section 6.7.3.

# 

Before opening the case, first ensure that mains power is disconnected from the unit.

# 

Before opening the case, disconnect the optional battery backup power, if used.

# 🗹 Note

In order to work with the 330 Bubbler module, the Signature must have an external desiccator installed. Refer to *External Desiccator*, on page 5-11.

Open the case, as described in Section 3.2.

If no bubbler was previously installed, remove the cover shield over the main CBA. This will not be used again, since the 330 bubbler assembly includes its own cover shield.

6.7.1 Preparation: Non-Bubbler

Figure 6-10 Remove non-bubbler shield

6.7.2 Preparation: Existing Open the case, as described in Section 3.2. Bubbler When replacing an existing 330 hubbler to a

When replacing an existing 330 bubbler, to ensure that the bubble line tubing is reconnected correctly, **label the tubing ends**, then remove the four mounting screws holding the 330 bubbler module in place (see Figure 6-11).

Figure 6-11 Remove bubbler module

6.7.3 Installation Procedure Referring to Figures 6-12, and 6-14, perform the following steps.

- 1. Place the bubbler assembly on top of the main CBA, ensuring that the four screw holes line up in the case, and the 10-pin connector engages correctly in its socket.
- 2. Attach the bubbler board to the control panel using the four self-tapping screws previously (part #231-6149-07). Do not overtighten.

Figure 6-12 330 Bubbler assembly installation

# 🗹 Note

There are three pieces of tubing on the bubbler that must be correctly connected for operation.

If any tubing is damaged, please purchase 1 meter of part #029-1353-02 and cut to the length needed for replacement. For additional information about tubing connections, refer to Section A.3 *330 Bubbler* in Appendix A *Replacement Parts*.

- 3. Replace the port plug in the bottom of the case (usually second from the left) with the bubble line fitting.
- 4. Route the reference line tubing (with fitting on the end) through the bushing and press the fitting into the reference connector on the connector case.
- 5. Route the intake tubing (the shorter of the two open-ended tubes) through the bushing and behind the ribbon cable, and connect it to the intake port in the case wall.
- 6. Route the other end of the short tubing through the bushing and connect it to the humidity connector on the board.
- 7. Connect the bubble tubing (the longer of the two open-ended tubes) to the bubble line port in the bottom of the case.

Some Signature flow meters have a 'Y' fitting connecting both the reference and intake ports to the humidity connector.

When installing a 330 bubbler in a unit with this tubing configuration, remove the 'Y' fitting and two shorter pieces of tubing. Bring the reference port tubing out from behind the ribbon and reroute it directly to the humidity connector.

Figure 6-13 Remove extra tubing and fitting (if applicable)

Figure 6-14 Routing and connections of 330 bubbler tubing

### 6.8 Front Cover Replacement

A replacement front cover (door) comes with latches attached, and two new hinge pins.

Align the hinges of the front cover front panel. Press the pins into the hinge barrels, with each flange facing inward (refer to Figure 6-15), until it is flush against the hinge surface.

Using a vice grip or other tool, spread and flatten the outward facing ends of the pins so they cannot be removed from the hinges.

Figure 6-15 Front cover (door) replacement

### 6.9 System Reset

In the event that the Signature Flow Meter becomes unresponsive, operation may be restored by removing and then restoring line power.

If the problem persists, operation may be restored by performing a hard reset.

A hard reset erases site data and restores the program to factory default settings.

To perform a hard reset, first remove line power and any external battery power and wait 30 seconds. Then, while holding down both the Home key and the Delete key, restore line power. **6.10 Service and Repair** Service tasks described in this manual may be performed on site by properly trained personnel. Other service and repairs must be performed at the factory. If your Teledyne Isco equipment requires repair, contact Teledyne Isco technical support.

# Signature® Flow Meter

## Appendix B Options and Accessories

**B.1 Ordering Information** 

Options and accessories can be purchased by contacting Teledyne Isco's Customer Service Department.

**Teledyne Isco** 

Customer Service Dept. P.O. Box 82531 Lincoln, NE 68501 USA

Phone: 800 228-4373 402 464-0231 FAX: 402 465-3022

E-mail: IscoInfo@teledyne.com

## 🗹 Note

For options and accessories exclusive to the external TIENet devices, refer to the appropriate TIENet user manuals (found at www.isco.com and listed in Section B.7 *Manuals*).

## B.2 Signature Flow Meter Accessories

| Cord grip fitting for TIENet cable   | 9-0073-12   |

| Probe Mounting Ring for 12" pipe | . 68-3200-010 |
| Probe Mounting Ring for 15" pipe |               |

## **B.8.2 Scissor Rings**

| Base Section (with tabs for mounting up to five probes) |             |
|---|-------------|
| Scissors Assembly                                       | 60-3004-170 |
| Extension 1 (9.0")                                      | 60-3004-172 |
| Extension 2 (21.5")                                     | 60-3004-173 |
| Extension 3 (31.5")                                     |             |
| Extension 4 (41.5")                                     |             |
| 16-24" Pipe ID  |             |
| 26-38" Pipe ID  |             |
| 38-44" Pipe ID  |             |
| 44-48" Pipe ID  |             |
| 60" Pipe ID   |             |
| 72" Pipe ID   |             |
| 16-60" Pipe ID  |             |
| Base Section (with plastic ties and manual).            |             |

## Note

Scissor Mounting Ring Assemblies will require a base and scissors section for all sizes. Each scissors ring includes a base section, scissors mechanism, extensions, plastic ties, and a manual). Sizes from 16" to 80" will also require two or more extension sections.

# Signature® Flow Meter

## Appendix C Modbus Output Protocol

|                  | Sections C.1 through C.3 give an overview of the basic capabil-<br>ities and operation of Modbus output protocol as it applies to the<br>Isco Signature Flow Meter.   |
|------------------|---|
|                  | For a Glossary of Terms and Common Acronyms, see Section C.4.   |
| C.1 Introduction | Modbus is a simple command/response mechanism to read from<br>and write to specific memory locations called <i>registers</i> . A register<br>is a holding place for a piece of digital information within the<br>equipment. The Signature uses Modbus ASCII and Modbus RTU<br>protocols, providing a standard protocol for real-time data<br>retrieval. The data can be sent to a central computer for display,<br>data collection, or process control. Modbus cannot be used to<br>retrieve historical data from the Signature's memory. |
|                  | This section describes the overall capabilities and operation of Modbus.  |
| C.2 Operation    | There are many standard, third party Modbus drivers and OPC servers that may be used to link a remote Modbus device, such as the Signature Flow Meter, to SCADA or process control software, such as Wonderware® <sup>1</sup> or Intellution® <sup>2</sup> . The OPC server communicates with the flow meter and accesses registers. The definition of what information is contained and where (the register number, or address) is set by Teledyne Isco.   |
|                  | The Signature register addresses, and what parameters are held where, are available in Table C-1 in Section C.6.1.  |
|                  | By accessing these registers you can obtain the current value of<br>whatever parameter you desire. The reading(s) can then be dis-<br>played or stored wherever you designate as a destination; for<br>example, a process control computer.   |
|                  | Not all registers are limited to read-only data storage. You can<br>also use two of the registers for control purposes. For example,<br>writing a "1" value to register 25 ("TakeReadingFlag" register),<br>tells the Signature to update its readings.   |
|                  |   |

<sup>1.</sup> Wonderware® is a registered trademark of Wonderware Software Development Corporation.

<sup>2.</sup> Intellution® is a registered trademark of Intellution, Inc.

## **C.3 Configurations**

A variety of configurations can be made with Modbus, either through direct connection or through a modem.

In the example shown in Figure C-1, you are direct-connecting a server PC to two individual Signature sites through Modbus, using the COM ports on the OPC Server, which are directly connected to the remote sites.

Connection to the flow meter is made via the RS-485 terminal on the Signature case board (refer to Figure 3-2 *Connector case, connectors, and fuses*).

Figure C-1 Configuration example

The operation sequence for the example above can be summarized in the following steps:

- 1. Signatures take readings from sensors.
- 2. Signatures store readings (level, velocity, flow rate, etc.) in their specified registers.
- 3. The user requests data through Process Control.
- 4. Process Control asks the OPC server to gather information.
- 5. OPC connects to the specified Signature flow meter through the cable (direct connection), retrieves site data and populates the OPC server's holding index.
- 6. Process Control takes the data from the OPC server's holding index and gives the data to the user.

Note that Process Control can be either manual or automated in this example, and that the OPC server and Process Control may be located physically on the same computer.

| C.4 Glossary of Terms | Address - An address is a digital location specified for a device |
|-----------------------|---|
| -                     | (such as the Signature Flow Meter).                               |

**ASCII** – Short for American Standard Code for Information Interchange, ASCII is a code that represents English characters with numbers. Most computers represent text with ASCII code, making it possible for one computer or device to share data with another.

**DCS** – Distributed Control Systems

**Dedicated Line** – A telecommunications path reserved for communication between two specified points and not shared among multiple points.

**Modbus Protocol** – Modbus Protocol is a messaging structure used to establish master-slave/client server communications between intelligent devices. Modbus is a simple command/response mechanism to read from and write to registers.

MTU – Master Terminal Unit

**OPC** – OPC (OLE for Process Control) means open connectivity via open (free for use) standards. It is a series of software standards specifications that fill a need in automation (like printer drivers did for Windows), acting as a translator for data transmission and process control.

The specification defines a standard set of objects, interfaces, and methods for use in process control and manufacturing automation applications to facilitate interoperability. There are hundreds of OPC Data Access servers and clients.

PLC – Programmable Logic Controller

**Registers** – A register is a location in memory for a specific data type. The definition of what data is contained and where (the registry number, or address) is set by the equipment manufacturer (in this case Teledyne Isco).

**RTU** – Short for Remote Terminal Unit (or Remote Telemetry Unit), RTU is a code that represents data using a compact binary format.

**SCADA** – SCADA (Supervisory Control And Data Acquisition) is a computer system for gathering and analyzing real-time data. SCADA systems are used to monitor and control plant operation, or equipment in industries.

The SCADA system transfers the information (for example, where a leak has occurred in a pipeline), back to a central site, alerting the home station of the leak, performing necessary analysis and control (such as determining if the leak is critical), and displaying the information in a logical and organized manner.

SCADA systems can be relatively simple, such as one that monitors the environmental conditions of a small office building, or very complex, such as a system that monitors all the activity in a nuclear power plant or a municipal water system.

**TCP/IP** – Transmission Control Protocol/Internet Protocol

| C.5 Signature ASCII or<br>RTU Address | The Signature's address (Device ID) is user-programmable between 2 and 247.                        |
|---------------------------------------|--|
|                                       |  |
|                                       | Be careful not to assign the same address to more than one flow meter.                             |
| C.6 Register Definitions              | The register definitions for the Signature flow meter are pro-<br>vided in the following table.    |
|                                       | Where no other Unit Of Measure exists for a parameter, percent (%) can be used in most situations. |

## C.6.1 Modbus Registers

|                    | Table C-1 Mod   | lbus O       | utput Reg           | isters f       | or Signature Flow Meter                                    |
|--------------------|-----------------|--------------|---------------------|----------------|--|

# Signature® Flow Meter

## Appendix D Material Safety Data Sheets

This appendix provides Material Safety Data Sheets for the desiccant used by the Signature Flow Meter.

Teledyne Isco cannot guarantee the accuracy of the data. Specific questions regarding the use and handling of the products should be directed to the manufacturer listed on the MSDS.

#### MATERIAL SAFETY DATA SHEET

#### Section 6: ACCIDENTAL RELEASE MEASURES

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container. Use respiratory protection and eye protection.

Large Spill: Use a shovel to put the material into a convenient waste disposal container. Vacuuming or wet sweeping may be used to avoid dust dispersal. Use respiratory protection and eye protection.

#### Section 7: HANDLING & STORAGE

Storage: Keep container tightly closed. Suitable for any general chemical storage area. Containers of this material may be hazardous when empty since they retain product residues (dust, solids); observe all warnings and precautions listed for the product.

#### Section 8: EXPOSURE CONTROLS / PERSONAL PROTECTION

Engineering Controls: Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit. Personal Protection: Safety glasses. Lab coat. Respirator (NIOSH Approved). Gloves.

|                   | Section 9: PHYSICAL & CHE         | MICAL PROPERTIES         |                   |

#### Section 10: STABILITY & REACTIVITY

Stability: The product is stable.

Hazardous Decomposition Products: Oxides of carbon and silicon may be formed when heated. Hazardous Polymerization: Will not occur.

Incompatibility with powerfull oxiders: Reacts with hydrogen flouoride, fluorine, oxygen difluoride, chlorine trifluoride, strong acids, strong bases, and oxidizers.

Conditions to Avoid: Moisture, extreme heat, and incompatibles.

#### Section 11: TOXICOLOGICAL INFORMATION

Routes of Entry: Absorbed through skin. Eye contact. Inhalation. Ingestion.

**Toxicity to Animals:** 

LD50: Not available.

LC50: Not available.

#### Section 12: ECOLOGICAL INFORMATION

Ecotoxicity: This material is not expected to be toxic to aquatic life.

## MATERIAL SAFETY DATA SHEET

Desi Pak®

SÜD-CHEMIE Creating Performance Technology

Date Issued: 07/06/2004 MSDS No: 5008 Date-Revised: 11/28/2011 Revision No: 3

## 1. PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME: Desi Pak® GENERAL USE: Desiccant

#### MANUFACT URER

Süd-Chemie Performance Packaging 101 Christine Drive Rio Grande Industrial Park Belen, NM 87002 **Customer Service:** 505-864-6691 24 HR. EMERGENCY TELEPHONE NUMBERS CHEMTREC: (800) 424 - 9300

Outside the U.S. Call Collect : 001 (703) 527-3887

## 2. HAZARDS IDENTIFICATION

#### EMERGENCY OVERVIEW

PHYSICAL APPEARANCE: Performance packaging product, size and type vary.

IMMEDIATE CONCERNS: Poses little or no immediate hazard.

#### POTENTIAL HEALTH EFFECTS

EYES: Roure of exposure unlikely. Dust may cause a mechanical irritation which can scratch the eye.

 $\textbf{SKIN:} \ \text{No odverse effects expected.}$ 

**INGESTION:** Non-toxic by ingestion. Packets or canisters may pose a choking hazard. Keep away from children and pets.

**INHALATION:** Route of exposure unlikely. This material is normally packaged and contained in a pouch, bag or canister. If the container is opened, prolonged or repeated inhalation of high dust concentrations may cause lung damage.

## 3. COMPOSITION / INFORMATION ON INGREDIENTS

| INGREDIENT(S)                         |            | <u> </u> |
|---------------------------------------|------------|----------|
| Pouch, Bag, Canister, Stopper, or Cap | CAS        | Wt.%     |
| Clay                                  | 1202 78 0  | 1 - 75   |
| Silica, quartz                        | 1302-78-9  |          |
|                                       | 14808-60-7 | < 0.5    |

See Section 8 for Exposure Limits

#### 4. FIRST AID MEASURES

**EYES:** Do not rub eyes. Flush with lukewarm, gently flowing water for 5 minutes or until the particle/dust is removed, while holding the eyelid(s) open. Obtain medical attention. **SKIN:** Wash with soap and water. 03/21/2012 14:04 FAX 14137368257

2 003

Page 2 of 5 :

## Desi Pak®

- INGESTION: Normally not needed. If large quantities are ingested, call your local Poison Control Center (1-800-222-1222 in the U.S.)
- INHALATION: Normally not needed. If exposed to excessive levels of dust or fumes, remove to fresh air and seek medical attention of cough or other symptoms develop or persist.

### 5. FIRE FIGHTING MEASURES

- FLASHPOINT AND METHOD: Material is not flammable
- EXTINGUISHING MEDIA: Use extinguishing agent applicable to surrounding fire.
- FIRE FIGHTING PROCEDURES: As in any fira, wear celf-contained breathing apparatus operated in pressure-demand mode, (NIC 3H approved or equivalent) and full protective gear.

#### 6. ACCIDENTAL RELEASE MEASURES

SMALL SPILL: No special precautions required.

LARGE SPILL: With shovel or scoop, place material into appropriate container.

#### 7. HANDLING AND STORAGE

- HANDLING: Use of proper hygiene practices in the workplace is recommended.
- STORAGE: Store in a dry area.

## 8. EXPOSUR CONTROLS / PERSONAL PROTECTION

#### EXPOSURE GUIDELINES HAZARDOUS COMPONENTS EXPOSURE LIMITS **OSHA PEL** ACGIH TLV mg/m<sup>3</sup> ppm mg/m<sup>3</sup> ppm Chemical Name [1] [1] [1] [1] TWA Clay 0.025 [3] [2] [2] [3] TWA Silica, quar'z

#### OSHA TABLE COMMENTS:

- 1. Exposure limits not established.
- 2. Total Dust = (30 mg/m3)/(%SiO2+2)

3. Respirab e

胞

ENGINEERING CONTROLS: If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

## PERSONAL PROTECTIVE EQUIPMENT

- EYES AND FACE: Follow facility guidelines.
- SKIN: Use of proper hygiene practices in the workplace is recommended.
- RESPIRATORY: Use local exhaust if dusting occurs. Good general ventilation is adequate in the absence of dusts.
- COMMENTS: All inert or nuisance dusts, whether mineral, inorganic, or organic, not listed specifically by substance name are covered by the Particulates Not Otherwise Regulated (PNOR) limit which is 5 mg/m3 for respirable fraction and 15 mg/m3 for total dust. ACGIH exposure guidelines of less than 3 mg/m3 (respirable) and 10 mg/m3 (inhalable) have been established for particles (insoluble/poorly soluble) not otherwise specified (PNOS).

Name and amount of Hazardous Substances or Elements in the product

产品中有毒有害物质或元素的名称及含量: Name and amount of Hazardous Substances or Elements in the product

O: 表示该有毒有害物质在该部件所有均质材料中的含量均在ST/标准规定的限量要求以下。

O: Represent the concentration of the hazardous substance in this component's any homogeneous pieces is lower than the ST/ standard limitation.

X:表示该有毒有害物质至少在该部件的某一均质材料中的含量超出ST/标准规定的限量要求。

(企业可在此处,根据实际情况对上表中打"X"的技术原因进行进一步说明。)

X: Represent the concentration of the hazardous substance in this component's at least one homogeneous piece is higher than the ST/ standard limitation.

(Manufacturer may give technical reasons to the "X"marks)

#### 环保使用期由经验确定。

The Environmentally Friendly Use Period (EFUP) was determined through experience.

生产日期被编码在系列号码中。前三位数字为生产年(207代表 2007年)。随后的一个字母代表月份:

A 为一月, B 为二月, 等等。

The date of Manufacture is in code within the serial number. The first three numbers are the year of manufacture (207 is year 2007) followed by a letter for the month. "A" is January, "B" is February and so on.

## **Teledyne Isco One Year Limited Factory Service Warranty\***

This warranty exclusively covers Teledyne Isco instruments, providing a one-year limited warranty covering parts and labor.

Any instrument that fails during the warranty period due to faulty parts or workmanship will be repaired at the factory at no charge to the customer. Teledyne Isco's exclusive liability is limited to repair or replacement of defective instruments. Teledyne Isco is not liable for consequential damages.

Teledyne Isco will pay surface transportation charges both ways within the 48 contiguous United States if the instrument proves to be defective within 30 days of shipment. Throughout the remainder of the warranty period, the customer will pay to return the instrument to Teledyne Isco and Teledyne Isco will pay surface transportation to return the repaired instrument to the customer. Teledyne Isco will not pay air freight or customer's packing and crating charges. This warranty does not cover loss, damage, or defects resulting from transportation between the customer's facility and the repair facility. The warranty for any instrument is the one in effect on date of shipment. The warranty period begins on the shipping date, unless Teledyne Isco agrees in writing to a different date.

Excluded from this warranty are normal wear; expendable items such as desiccant, pH sensors, charts, ribbon, lamps, tubing, and glassware; fittings and wetted parts of valves; check valves, pistons, piston seals, wash seals, cylinders, pulse damper diaphragms, inlet lines and filter elements; and damage due to corrosion, misuse, accident, or lack of proper **installation or** maintenance. This warranty does not cover products not sold under the Teledyne Isco trademark or for which any other warranty is specifically stated.

No item may be returned for warranty service without a return authorization number (RMA) issued by Teledyne Isco.

This warranty is expressly in lieu of all other warranties and obligations and Teledyne Isco specifically disclaims any warranty of merchantability or fitness for a particular purpose.

The warrantor is Teledyne Isco, 4700 Superior, Lincoln, NE 68504, U.S.A.

\*This warranty applies to the USA and countries where Teledyne Isco does not have an authorized dealer. Customers in countries outside the USA, where Teledyne Isco has an authorized dealer, should contact their Teledyne Isco dealer for warranty service.

Problems can often be diagnosed and corrected without returning the instrument to the factory. Before returning any instrument for repair, please contact the Teledyne Isco Service Department for instructions and to obtain a return material authorization number (RMA).

Instruments needing factory repair should be packed carefully and shipped to the attention of the service department. Small, non-fragile items can be sent by insured parcel post. **PLEASE WRITE THE RMA NUMBER ON THE OUTSIDE OF THE SHIPPING CONTAINER** and enclose a note explaining the problem.
