### SITRANS LC300

#### Overview

SITRANS LC300 is an inverse frequency shift capacitance continuous level transmitter for liquid, interface, and solid applications. It is ideal for standard industrial applications in chemical, hydrocarbon processing, food and beverage, water, wastewater, mining, aggregate, and cement industries.

#### Benefits

- Active-Shield technology so measurement is unaffected by material buildup in active shield section
- Highly accurate and reliable PFA-lined probes
- Integrated local LCD display
- 2-wire (4 to 20 mA) current loop design
- Current signaling according to NAMUR NE 43
- Push-button calibration and programming
- Stilling well (ground tube) version for low dielectric media, agitated materials, and non-metallic vessels

#### Application

SITRANS LC300 is a 2-wire level measurement instrument combining a sophisticated, yet easy-to-adjust microprocessor with field-proven probes. It is available in four versions: rod, rod with stilling well, cable with PFA insulation, and cable without PFA insulation.

Materials with low or high dielectric properties are accurately measured and Active-Shield technology helps in ignoring the effects of buildup or condensation near vessel nozzle.

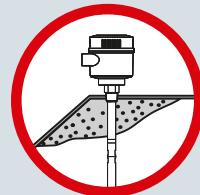

- Key Applications: conductive ( $dK \geq 20$ ) and non-conductive ( $dK < 20$ ) media including: liquids and solids in standard industrial processes, bulk solids applications involving dust, and chemical processes involving vapor

#### Probe Applications

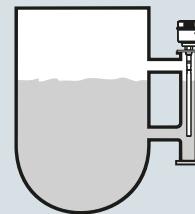

Rod version	Conductive liquids, slurries or solids
Rod version with stilling well	<ul style="list-style-type: none"> <li>• Conductive liquids or slurries in non-conductive tanks</li> <li>• Non-conductive liquids in non-conductive tanks</li> <li>• Tanks with agitation or turbulent liquids</li> <li>• Liquids with a dielectric constant below 2</li> <li>• Non-linear tanks, such as parabolic or spherical tanks</li> <li>• Interface measurements</li> </ul>
Cable version	Non-conductive solids or liquids
PFA coated cable version	Conductive or sticky liquids, slurries or solids

#### Configuration

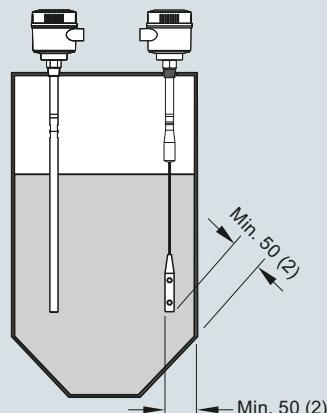

##### Installation

Build up of material in active shield area does not affect switch operation.

Mounting on a bypass

Install probe at least 50 (2) from tank wall.  
Note angle of repose and adjust accordingly.

**Notes:**

- 1) Rod version, welded flange Y02: shield length = 100 (3.9).
- 2) For non-conductive applications only. Non-insulated cable can be shortened on site. Weight is included in measuring length.
- 3) For liquid and solid applications. Insulated cable cannot be shortened. Weight is **not** included in measuring length.
- 4) For conductive materials, the measuring length includes the exposed PFA insulated cable only. Any fluid contact with the upper rod assembly will result in a short circuit and incorrect readings.
